F

Editor's Note: President G. Wayne Clough presented the following speech, November 18, 1994, at the Tech Today luncheon, sponsored by the GTH Alumni Association.

The state of our university, students, and distinguished visitors. I am pleased to be with you today to bring you the State of the Institute Address. A year ago, I had no idea what my first year would hold. I was afraid that I would be here on this day. In fact, I knew 10 years ago I would be here on this day. Because 10 years ago, I found myself at the college readiness for our 200th anniversary. And I vowed then that I would be here for my 30th reunion. And so today, Oct. 21, 1994, I am the 30th reunion, which we all thank for the work he did for Georgia Tech and wish well.

As a good engineer, my instinct — when I am up against some technical problem, is to take it apart and know how it ticks. In my first State of the Institute Address I will begin by looking at the component parts that make up the Georgia Tech of today. Then I will tell you where we stand and where we go. As we do that, you will see where we went in our history and where we are going.

Our graduates increasingly reflect the population of our country, and an essential development to our future success. We are committed to improving the diversity and quality of our student body.

Many of our intercollegiate teams have achieved successes we could only dream about a decade ago. In fact, more than half of our student body population participates in extracurricular activities. Example of the success in this area is provided by our symphonies, orchestras, and our chamber group that performed at the Georgia Music Educators' Annual Convention.
