Ground Breaking Held On New Library Site

By Eddie Logan

Groundbreaking ceremonies for Georgia Tech's new $2,000,000 Price Gillett Library were held on Thursday morning, July 5, at eleven o'clock.

The ceremonies began with a president-emeritus of Georgia Tech, President Blake E. Van Leer acting as master-of-ceremonies. He introduced the distinguished guests who included members of the Board of Regents, state and city officials, leading educators, and outstanding Georgia Tech alumni. This was followed by a short address by Mr. K. E. F. O'Neill, the Governor's representative, and a tribute by Mrs. J. Henley Crossland, Georgia Tech Librarian, to the late Price Gillett. The ceremony was offered as a social event by Dr. Phil Narmore, president of the organization.

The program concluded with the groundbreaking by Governor Herman I. Talmadge, who pushed the first inter of soil over with a bulldozer.

Lewson President Of New Activities Council

Last Tuesday night the newly-formed Activities Council held elections and chose their officers for the coming year.

Acting chairman, and founder of the organization, Law Lewson was elected to the position of president. Carter Patrick was chosen vice-president with Dick Wasserman being named secretary-treasurer.

The election of officers concluded the organization of the council and plans were made concerning the Activities Day program which will be held at the beginning of each school year. The presentation will feature displays by the various clubs, publications and activities throughout the school.

The functions of the organization are to give new students a more complete picture of the opportunities for making themselves well known to the organization. As a result, the student who might like to engage in activities is hampered by his lack of knowledge of the steps necessary to take an organization. By means of the Activities Day exhibits and presentations each interested organization will be able to introduce to the student those qualities which might appeal to him.

The exhibits will probably consist of an attractive display with information advertising the benefits of the organization, printed material with the name and insignia of the emblem or key. There will also be a well representing the organization, Lewson president of the organization, Lewson, was elected to the position of president. Carter Patrick was chosen vice-president with Dick Wasserman being named secretary-treasurer.

Regulations

...pertaining to the new Freshman Class are clarified.

Many questions have been asked by upperclassmen as well as freshmen about the rules pertaining to the wearing of the "rat cap" and the Freshman Code. In order to clarify as much as possible, we're printing all information available on the Freshman Code. The rules are not intended to punish or degrade a person because he happens to be in his first year of college, but rather to remind him that he has an obligation as well as a duty to perform in upholding, improving, and carrying on the reputation and tradition that Techmen before him have made.

All freshmen are required to wear a "rat cap" at all times when out of doors. The cap will be properly inscribed with the name, home town and department of the freshman, and the phrase "To Hell With Georgia." The only time the cap is not required out of doors is when you are actively participating in a sport. The cap is worn off, as well as on, the campus.

The text above indicates that the Freshman Code pertains to everyone connected with Tech, as it fosters a friendly spirit, not found on many campuses. All meetings and pep rallies will be attended. The reason for this rule is obvious and needs no further amplification. The book shelves in the "Robbery" are to be used by upperclassmen only. There is a limited space available there and this has been reserved for upperclassmen use.

Other rules will be in effect in the fall. These rules pertain to circumstances which occur in the fall quarter.

TUITION

...increase is made under direction of Board of Regents.

Since the beginning of the Summer quarter, I have received letters from several students wanting to know the cause of the increase in tuition that has just been put into effect, and in some cases, what effect the removal of the Emergency Fee would have on their Alexander Memorial Fund pledge. It seems that the majority of the students knew that the sales tax would be bringing additional revenue into the state treasury which could be appropriated for the University System of the state and therefore were expecting a decrease rather than an increase in their fees.

In the first place, it must be understood that the tuition has not actually been increased, but rather the Emergency Fee has been incorporated in the regular tuition as was directed by the Board of Regents. It should be remembered that in a mass meeting of the student body, held by President Van Leer just prior to the close of the Spring quarter, the fact that the Emergency Fee might be removed was discussed and the President remarked that in a mass meeting of the student body, held by President Van Leer, it has been increased, but rather the Emergency Fee might be removed was discussed and the President remarked that in a mass meeting of the student body, held by President Van Leer, it was stated that the Emergency Fee would have an obligation as well as a duty to perform in upholding, improving, and carrying on the reputation and tradition that Techmen before him have made.

All freshmen are required to wear a "rat cap" at all times when out of doors. The cap will be properly inscribed with the name, home town and department of the freshman, and the phrase "To Hell With Georgia." The only time the cap is not required out of doors is when you are actively participating in a sport. The cap is worn off, as well as on, the campus.

so much in fact, that the following plan has been adopted: If a student now feels that he cannot make the contribution as he had pledged, he may simply give his name to Mr. Jamie Anthony, the Georgia Tech Comptroller, and his pledge card will be put into a contingent file where it will remain until the student himself feels that he is able to fulfill his pledge. Mr. Anthony further stated that he wanted everyone to realize that "no pressure of any kind will be used in collecting money that has been pledged." It should be mentioned that the committee on financing the Alexander Memorial Fund has figured that the total cost of completing this project will be some-what higher than had originally been calculated due to the depletion of pledges and to higher building costs.

With the facts now before us, we here at Georgia Tech can appreciate the possibility that the new students to Georgia Tech will be given the opportunity to make a pledge during the Fall quarter. 

Other rules will be in effect in the fall. These rules pertain to circumstances which occur in the fall quarter.

**Thirsty University of Alabama Students Dislike Long Drives For Short Beers**

By Harvey Lewis

Tuscaloosa County is again going to vote on whether or not it wants to legalize the sale of drinking alcohol. This is the fourth time such a vote has been called. The University of Alabama's student body seems to be behind it practically unanimously. Ninety-three per cent of the coeds are for it.

A girl just not safe if she is not a member of a sorority at the University of Alabama, for the men seem to have handsome intentions toward them. A lovely young woman was awakened in the early morning by a male student gazing passionately into her second floor window. Not recognizing him, she screamed (besides she hadn't even had breakfast). Realizing he was not numbered, he fled.

Whether it was someone seeking revenge or just another prankster, thePhi Mu house received a phone call from the water company, for 15 minutes the girls were in such a state that one of the coeds took it upon herself to organize a date bureau. She urged the men to sign up as soon as possible on a list that is to consist of name, phone number, height or anything that will give evidence of the signer being a male. This list was posted in the girl's dorm for the coeds to have a fair chance at the opposite sex.

—The Crimson and White.

Apprently the young men's fancy didn't turn as far as the girls would have liked it to this summer. At least not at Iowa State College. Things were in such a state that one of the coeds took it upon herself to organize a date bureau. She urged the men to sign up as soon as possible on a list that is to consist of name, phone number, height or anything that will give evidence of the signer being a male. This list was posted in the girl's dorm for the coeds to have a fair chance at the opposite sex.

**Dean Pershing Resumes Tech Duties**

Dean John J. Pershing has returned to the Tech campus to resume his position as Associate Dean of Students. He received a leave of absence from his duties for a year in order to pursue work at the University of Indiana that would lead to a doctorate degree.

Dean Pershing has been a member of the Tech faculty since 1947. While at the University of Indiana, Dean Pershing found time for other activities beside the regular studies. He became a member of the National Vocational Guidance Association.

OWNED AND OPERATED BY GEORGIA INSTITUTE OF TECHNOLOGY
New Research Laboratories
Open to Amateur Scientists

The facilities of Sinclair Research Laboratories, a multimillion dollar research plant at Harvey, Ill., are being opened to "any American with an idea for a new or better petroleum product or application," said P. C. Spencer in announcing details of the Sinclair plan. Cited as a way to meet the nation's critical needs, the plan will provide a means of removing a major obstacle to inventiveness - lack of proper financial and research facilities. Two other factors are needed - facilities and money. The Sinclair plan is specifically designed to bring these and the man together.

The research plant at Harvey was built with an eye to the future. Although Sinclair has a number of important projects under way, the potential capacity of the laboratories is greater than current requirements. The Sinclair plan proposes to make a portion of this capacity available to independent inventors for research and development.

The facilities available at the research laboratories consist of nine new and modern buildings located on a 38-acre site. Most of the buildings are air-conditioned and soundproofed and have a total floor area of 200,000 square feet. Each unit has been designed to handle a specific phase of petroleum research.

Ideas will be invited from inventors everywhere. The success of the plan, therefore, depends on finding every American without available facilities who has an idea for a new or better petroleum product, or for its improved application. These people will be invited to submit to the laboratories any ideas they may have for better petroleum products.
