Dean of the Graduate School

Head of the Industrial Education Department
CONTENTS

Preface

Including: The purpose of the thesis-findings in general-conclusions in general.

Part One
The Background

1. Juvenile Employment Prior to the N. R. A. 1

Including: The depression's effect on juveniles-the change in Juvenile Employment between 1920 and 1930-the present status of Juvenile Employment with regard to types of Juvenile occupations-the status of working standards in the occupations now followed by juveniles-the effect on school standards-figures on the extent of child labor

2. Georgia School Records on Attendance Laws 12

Including: Day School-continuation school-evening school

3. Georgia Child Labor Standards 13

Including: Minimum age-hours-night work-requirements for work certificate-mines and quarries

4. The National Industrial Recovery Act 14

Including: The N. I. R. A. and its effect on juvenile employment-the principal points in the Cotton Textile Code-the Cotton Textile code and its proposed change in child labor-the President's reemployment program- Employer's pledge with regard to the Blue Eagle-The abolishing of child labor-the abolishing of desirable juvenile jobs-the forgotten juvenile-the Juvenile section of the national retail trade Code
PART TWO

The Survey

1. Methods Used in this Investigation
   Including: Preliminary Survey- Places of Juvenile Employment-Method in the actual Survey-Data Sheet
   21

2. The General Trend of Present Juvenile Employment Conditions
   Including: The full time worker-the part time worker-facts about the part time worker in Atlanta-Types of Juvenile employment in Atlanta.
   24

3. The Juvenile Street Worker
   Including: Provisions for regulation-Weakness of enforcement-Reasons for failure of the City Ordinance-Street trades-Newspapers-Mutual agreements between papers-Divisions of Newspaper employment-Rewards and prizes granted by the different newspaper companies
   26

4. Western Union and Postal Telegraph
   Including: The number employed by ages-their busy season-organization of working time-the back to school movement-changes and advancement
   31

5. Clerking and Curb Service
   Including: Changes due to the economic situation-explanation of the chain store worker-chances and ways of advancement-the drug store curb service worker
   33

6. Kress and Woolworth 5 and 10¢ Stores
   Including: Business conditions-Sales personnel changed-Busiest season-Improvement of Sales
   35

7. The Juvenile Industrial Field
   Including: Conditions due to the economic condition-The American Can Company-Selection of employees-trade school needed-advantages of co-op courses.
   37
8. The Situation of the Unemployed Juvenile

   Including: The decrease in employment-the young crime wave-The increased school attendance

Part Three

Assembly of Statistics

1. The Atlanta Public School Attendance Statistics

   Including: The enrollment, average weekly, the cumulative mortality from 1924 to 1932-Registration report-Average daily attendance-attendance in special schools-withdrawal report

2. The Juvenile Employment Placement Bureau

   The Community Employment service-The indications of data from the Community Employment Service-The follow-up letter of the service-monthly statistical report on placement from 1930 to 1932

3. Juvenile Employment Conditions in Georgia Compared with Those in the United States as a Whole

   Including: Facts on child labor-a summary of comparisons by ages, trades, states

4. Detailed comparisons between the 1920 and 1930 Census as to numbers and percentages for the nation, sections and states

   Including: ages 10 to 13-10 to 15-16 to 17

5. Status of the Adolescent Girl Population in the United States

   Including: The Juvenile girl worker in Atlanta-The adolescent girl worker of the United states-Table showing: number of girls 14 to 17, where they live, what they do, proportion of city and country girls, number in industry and business, number in less desirable jobs-Chart 1 showing occupational distribution of employed adolescent girls 14 to 17-Chart 2 giving comparison of U. S. regional sections of employed girls in 1920 and 1930 census.-Detailed comparison by states of the 1920 and 1930 census as to those attending school and those gainfully employed.
PART FOUR

Recommendations

1. The Child Labor Laws
   Including: Individual state regulation of child labor-state ratification of a proposed Amendment-Purpose of a good child Labor Law-Suggested minimum standards

2. Recommendations for Child Labor Legislation
   Including: Age and hour regulation-hazardous occupations-minimum wage

3. Preventing Child Labor Through School Organization
   Including: Teaching the individual-taking the instructional material suit the student-Vocational guidance for all students

4. News from the States regarding proposed regulation

Appendix

1. Compiled Report of Survey

2. Survey Data Sheets
The purpose of this thesis is to set forth the results of an investigation made to find out whether Juvenile Employment is on the increase or decrease in the City of Atlanta, the State of Georgia, and the United States as a whole. The investigation was also to ascertain the exact status of the Juvenile Worker.

The public school attendance records and the United States Census reports for 1920 and 1930 show that Juvenile Employment is on the decrease. If this is so, what has become of the Juvenile Worker? Public school attendance records show that the school enrollment has increased. This indicates that the Juvenile Worker who cannot find employment is turning to the schools for more education with the idea of becoming better prepared for future positions that might open to him.

Employers are demanding better trained and better educated workers. This helps to keep boys and girls in school longer. A large number of people interviewed for this thesis are of the opinion that some legislation should be enacted in Georgia to keep unemployed Juveniles in school so that when the economic situation becomes normal again these Juveniles will not be dropping out of school to flood the industries with unskilled labor. Such a law would not only put an end to Juvenile Employment, but would also give
boys and girls a chance to educate themselves for worthwhile positions and worthwhile living. Such a law would benefit the individual, the employer and employee, and society as a whole.
PART ONE

BACKGROUND

OF THE SURVEY
The present period of acute business insecurity and economic change has up to this time vitally affected the children of the nation. It has affected (1) their health, (2) their home environment, (3) their education, and (4) their employment. The Conference on Immediate Child Labor Problems held in Washington on December 10th, 1932 was greatly concerned with the decrease in child employment. Child employment has decreased in proportion to the decrease in employment in general. It moves up and down in accordance with the peaks and troughs in adult employment. Throughout the last ten year period there has been a steady downward trend in child labor. When adult employment picks up there will be a corresponding increase in juvenile employment unless legislative measures are taken to prevent it.

Decrease in child labor has not been uniform throughout all the lines of business in the country. The least desirable jobs for children have been the slowest to let the children go. For instance, children have been driven into street trades, industrial home work, domestic and personal service, and industrialized agriculture. These are the lines of work that are the least regulated. They are the most likely to abuse juvenile workers, exploit them, and work them long hours for low wages.
This situation in regard to child employment was apparent in the census taken in April, 1930. The last two years have aggravated the situation even more. Among other things brought out by the 1930 census was the fact that there has been a decline since 1920 of 38 per cent in the number of children from the age ten to the age 13 that are gainfully employed. There has been a 37 per cent decrease for children of 14 and 15, and a 14 per cent decrease for children of 16 and 17. There may be an explanation for the small decrease in the employment of the youngest group. It may be due to the fact that children of this age are employed mostly in agriculture, then in domestic and personal service, and then in street trades—all difficult to regulate, check, and determine, especially when families are suffering from acute poverty.

In April, 1930 more than 2,000,000 boys and girls under 18 years of age were employed. 667,000 were under 16. Of those under 16, nearly 200,000 were engaged in non-agricultural occupations. This last figure represented a 53 per cent decrease since 1920. Of course this striking decrease was not the same in all the states. The bulk of the decline in the number of 14 and 15 year old children in occupations outside of agriculture occurred in the northern and eastern states. These states were hardest hit by general unemployment. In the South, where unemployment was not so bad, a few states actually showed an increase in the number of 14 and 15 year old children at work: South Carolina showed an increase of 29 per cent;
Florida, an increase of 7 per cent; and Georgia, an increase of 2½ per cent.

During those ten years the number of children under 16 employed in manufacturing industries declined 63 per cent. Those employed in the iron, steel, other metal, rubber, paper box, woolen and worsted, clay, stone, and candy industries showed a decline of 80 per cent or more. Jobs along the line of transportation and communication decreased more than one half. But jobs in the trades decreased only one fifth, while jobs in domestic and personal service decreased only 15 per cent.

The number of boys and girls 16 and 17 years old employed in the above occupations declined less; nearly a million and a half being employed in 1930. 16 and 17 year olds employed in manufacturing and mechanical and clerical occupations decreased about one third, those in transportation and communication decreased one fourth, while those employed in trades had increased three per cent and those in domestic and personal service increased 45 per cent. In many cities there was a very large increase in juveniles employed as waiters and servants: for instance, juvenile waiters in New York increased 60 per cent in number; in Pittsburg, 99 per cent; in Chicago, 153 per cent; in Detroit and Cleveland, more than 175 per cent.

However, in the face of a general decline in juvenile employment in manufacturing and mechanical industries as a whole, there were a few significant increases
in the employment of 16 and 17 year olds in the textile industries of the South, and the clothing industries of the New England and Middle Atlantic States. Here there has been a change from older to younger employees. In the clothing industry of Connecticut and Rhode Island the number of 16 year old workers has increased 123 per cent, 17 year old workers 283 per cent. In New Jersey the increase in 16 and 17 year old workers has been 81 per cent, in Pennsylvania, 62 per cent, and in Massachusetts 52 per cent.

The census indicates that the better grade jobs for all age groups are disappearing faster than the less desirable jobs. For boys and girls between 10 and 18 years of age there was a 46 per cent decrease in clerical jobs, a 63 per cent decrease in apprentice jobs, and a 22 per cent decrease in clerking jobs. During the three years since the census was taken there has been a wholesale decrease in juvenile employment in the better lines of business. In 40 large cities there was a 26 per cent drop between 1930 and 1930-1 in the number of certificates issued to 14 and 15 year olds. This showed a parallel decline in the number of children employed in occupations requiring certificates. Reports from Junior Placement Bureaus, Employment Certificate offices indicate that most of the openings still available for children of 14 and 15 are in domestic service, in canvassing, and in types of manufacturing in which the breakdown in standards is great-
est. In Cleveland, for instance, from March to November, 1932, 4,244 boys and girls 16 and 17 years of age received permits for leaving school and working full-time. 379 children of 14 and 15 years of age received permits to work after school hours or during vacation. More of them than was expected, about a third, did not get jobs but were "parent helpers". These "parent helpers" were mostly 16 and 17 years of age, but 27 were still 14 or 15. In the whole group of 2,921 boys and girls finding employment in Cleveland, a fourth were housemaids. Fourteen per cent were laboratory and 10 per cent were caddies. Nearly a fifth (532) were sales boys and girls, and of these 114 were selling newspapers and magazines.

Apprenticeship figures for Wisconsin—the only state in which a supervised system of apprenticeship is in effect—show only 73 new indentures in trades in 1931 as compared with 755 in 1929.

Another effect of the depression has been the lowering of child labor standards in general. Under the pressure of adverse business conditions, business places have either lessened or completely done away with legislative protection for young workers. The employer's need for profits however small together with the employee's need for work at any wage have lowered wages and have brought about a sweatshop condition in certain manufacturing industries.

In Scranton during the first 6 months of 1932 the median wage for a group of 14 and 15 year old children was
$4.94 for boys and $4.20 for girls; in Pittsburgh, $5.43 for boys and $5.14 for girls. In Philadelphia, where a higher wage level usually exists, the median for a somewhat older group—just under 15—was $7.14 for boys and $6.55 for girls. Wages for girls in domestic service are now as they were during the first 6 months of 1932. They are very low, almost nominal.

In certain lines of manufacturing there was a revival of the sweatshop. In many small towns it is easy to find the sweatshop conditions. Low wages, long hours, Sunday work, and the giving out of home work characterizes many establishments. It is from such firms that demands for child workers are still forthcoming. Complaints against sweatshops have been raised in Connecticut, Massachusetts, New Jersey, Pennsylvania, and Maryland. In addition to the evils already cited the following are also very evident.

An investigation made by the Massachusetts Minimum Wage Commission last spring disclosed that rates as low as 10 cents, and in one case 5 cents, an hour were being paid to girl workers in Fall River; and hundreds were earning less than $5.00 a week. In 5 plants investigated, plants manufacturing men's clothing and furnishings, women's underwear, housedresses, and children's dresses, only five employees earned more than $15.00 a week. Of 1,616 employees in 13 plants making women's apparel 71 per cent earned less than $10.00 a week, and 97 per cent earned less than $15.00 a week. In one of the worst-paid shops hourly
rates ranged from 10 cents to 16 cents an hour; the earnings of the workers employed for a full week of 43 hours, ranged from $4.80 to $7.68 a week. Practically all the shops paying these low wages started after the present depression began. Many concerns of similar character have been established in other Massachusetts cities during the period of depression. In New Bedford, for instance, it was found that wages paid were even lower than in Fall River, and check-ups at later dates revealed that wages were still on the downward scale. The Massachusetts Commissioner of Labor and Industries has denounced these wages for being far below any reasonable living wage scale and far below standards hitherto maintained by the industries of the state.

In New Jersey the Consumer's League reports $2.50 to $3.50 a week as the average wage for hundreds of workers in contract clothing shops. In Baltimore, in the fall of 1932, because of a strike of garment workers against some of the largest manufacturers in the city, an investigation was made of the men's clothing industry. It was made by Professor Jacob H. Hollander of John Hopkins at the request of the Mayor. Although the principal firms refused to appear at hearings or to cooperate with the investigators, much was discovered concerning low wages, bad working conditions, and long working hours. As was to be expected, the worst conditions were found in the smaller contract shops. Twenty-three per cent of a selected group of women employees were found to be under 20. Some of the girls at the hearings
had begun work before they were 16. The percentage of women and girls employed in the industry has been steadily rising until now 60 percent of the total number are women and girls. They receive lower wages than do the men. In recent years there has been a tendency for some employers to move their shops to small towns in Maryland, West Virginia, and other States where wages are lower and hours longer.

The breakdown in standards is not confined to the clothing industry. In Pennsylvania the head of the Inspection Bureau of the Department of Labor and Industry has found overtime hours for women and children to be its outstanding problem. Women work a 19-hour day and a 54-hour week, children a 9-hour day and a 51-hour week. Ninety-six of the last 100 cases prosecuted by the labor department were for violations of the woman and child labor laws. In New York State the proportion of violations of the child labor laws increased 30 per cent in 1931 over 1930; in California violations of the laws governing the employment of women and children increased 15 per cent from 1930 to 1932.

School standards also have suffered during the depression. In the general retrenchment of public expenditures which this depression has necessitated, the appropriations for schools have been cut with little regard either for the question of what functions of the school system should be sacrificed or for the more vital question of whether cuts represent real economy or not. About three out of every
four cities in the United States are attempting to operate on a smaller school budget this year than last. 1932 school budgets were about 5 per cent below 1931 budgets and 1933 will show additional cuts amounting to 6 per cent. A few cases may be cited: In Oklahoma the school year averages only three or four months in most of the districts; in Arkansas, many schools will operate on tuition basis; in Alabama, half the rural schools closed before Christmas, 1933. In many other States, owing to decreased funds, great uncertainty exists as to how the schools will finish the year. More than half of 1,285 cities reporting to the United States Office of Education have eliminated or curtailed education.

A survey conducted by the National Educational Association found that of the great number of school systems that are being curtailed, very few have curtailments that have anything to do with real saving or real economy. While all real savings are essential at any time and particularly so at present, this investigation leads one to ask whether the American people are not needlessly crippling their school systems under the hysteria of a tax-reduction policy which is neither sound economics nor sound economy.

At the present time cuts in school appropriations are particularly serious because of the increased responsibilities that have been thrust upon the schools. School enrollments which were mounting during the years of prosperity, have been further increased by the depression. Enrollment in Federally-aided Vocational classes increased 18 per cent in 1931 over 1930 enrollments and the increase in enrollment from 1930 to 1
was 17 per cent over 1929. There was an increase of 4 per cent in 1929 over 1928. If the girls and boys between the ages of 14 and 13 that were working in 1920 and that are now out of employment were seeking employment, there would be more than a million added to the already overcrowded labor market. These are now in schools. Thus, the schools have helped to lessen the number of unemployed. Furthermore, in practically every community, hundreds or thousands of young men and women, unable to find work, are returning to school to continue their training and prepare for opportunities that will open up to them when more prosperous times return. Schools must be enabled to provide for the needs of this older group.

The most recent figures on the number of boys and girls in the United States that are gainfully employed are figures of April, 1930. They show 667,118 children of the ages 10 to 15 years gainfully employed in the United States. About 240,000 were under 14, the age generally recognized in State laws as the minimum age at which children should be permitted to go to work, and then under certain restrictions. This number is nearly one-tenth (9.2) of all the boys and girls of this age group in the United States. Statistics are given below:

</table>
The 1930 figures represent a decrease in a ten-year period, a decrease of 38 per cent in the number of employed children 10 to 13 years inclusive, 37 per cent 14 and 15 years old, and 14 per cent 16 and 17 years old. The 1930 Census, however, taken when the unemployment situation in many parts of the country was already acute, portrayed conditions that were far from normal. Figures for employment certificates issued to children of 14 and 15 indicate that if the Census had been taken in 1929 instead of 1930 it would have told an entirely different story.

Of the number of children 10 to 15 years of age inclusive, 70 per cent were engaged in agriculture, 10 per cent in manufacturing and mechanical industries, and 14 per cent in trades and domestic and personal service.

---

Facts and figures received from the U. S. Census and the U. S. Department of Labor.
STATE of GEORGIA
COMPULSORY SCHOOL ATTENDANCE LAWS
January 1, 1930

A. Day School
   1. Age: from 8 to 14 years of age.
   2. Exemptions
      a. Completed the 7th grade.
      b. Temporarily excused for good reasons.
         (Local Board of Education to grant excuses)
      c. Temporarily excused by Principal or Teacher in charge, because of bad weather, sickness, etc, or other reasonable cause.
   3. Minimum attendance required—six months.

B. Continuation School
   1. No provision.

C. Evening School
   1. No provision.

Taken from Chart No. 1, The State Compulsory School Attendance Standards affecting The Employment of Minors, January 1, 1930. Prepared by The Children's Bureau, U. S. Dept. of Labor, Washington, D. C.
STATE of GEORGIA  
CHILD LABOR STANDARDS  
January 1, 1930.

A. Minimum age:
   1. For Factories -- 14 years of age.
   2. Stores-- No provision.

B. Hours of labor under 16
      A "sunrise to sunset" provision for persons under 21.
   2. Maximum hours
      a. Daily -- No provision.
      b. Weekly -- 60 hours.
      c. Days per week -- No provision.

C. Night work prohibitions under 16
   1. Hours between which work is prohibited, 7 P.M. to 6 A.M.
   2. Factories -- same as above.
   3. Stores -- No provision.

D. Requirements for regular employment certificates under 16.
   1. Physician's certificate of physical fitness.
      a. Employment certificate must show that the child is
         physically fit to follow the employment sought; State
         Department of Commerce and Labor holds that examination
         by a physician is compulsory.
   2. Educational requirements
      a. No grade specified; ability to read and write simple
         sentences in English are required.

E. Mines and Quarries -- must be 16 years of age.

---

Taken from Chart No. 2, State Child Labor Standards, January 1, 1930.  
Children's Bureau, U. S. Dept. of Labor, Washington, D. C.
On June 16, 1933 the National Industrial Recovery Act was put into operation. It caused a marked change in all lines of employment. It was the President's idea for putting to work as many unemployed men as possible. This was to be accomplished by putting certain limitations upon the use of machinery and by substituting manual labor for machinery. A minimum wage scale was to be set up for different types of work, and a minimum working day was to be adopted. The N. I. R. A. was to deal only with the adult worker. After it was set up, the first industry to submit a code was the Cotton Textile Industry. The code was written up by the Industry's self-governing agency and was to function subject to the approval of the administration.

The Cotton Textile Industry Code submitted to the President dealt with (1) minimum wages to be paid, (2) working hours, (3) the abolishing of child labor (This concerned minors under 16 and was a voluntary proposal from the industry itself.) (4) the submitting of a periodical statistical report, (5) the mandatory statutory recitation of the rights of labor, (6) the mandatory statutory recitation of the President's right to cancel, modify, or amend the code, (7) the submitting to the consideration of the President all future amendments of the code at the instance of the in-
Industries were very slow in responding to the
N. J. R. A. The President was forced to start another
program in order to get more and quicker action. He
launched the President's Reemployment Program which en-
listed the individual employer's agreement or pledge to
the President to abide by certain regulations until
his business or industry, as a whole, could submit a code
meeting the requirements of the N. J. R. A. Upon sign-
ing the pledge the employer was given a certificate and a
display card on which was a Blue Eagle and the slogan,"We do our part."

Following is a copy of the pledge taken by employ-
ers in the President's Reemployment Agreement:

...
PRESIDENT'S REEMPLOYMENT AGREEMENT

I herewith present in part, a copy of the Employers Pledge to The President of The United States in application for the N. R. A. insignia, The Blue Eagle.

* During the period of the President's emergency reemployment drive, that is to say, from August 1 to December 31, 1933, or to any earlier date of approval of a code of fair competition to which he is subject, the undersigned hereby agrees with the President as follows:

(1) After August 31, 1933, not to employ any person under 16 years of age, except that persons between 14 and 16 may be employed (but not in manufacturing or mechanical industries) for not to exceed 3 hours per day and those hours between 7 A.M. and 7 P.M. in such work as will not interfere with hours of day school.

As this thesis is on Juvenile Employment we are vitally interested in paragraph 1 of the foregoing pledge. It will be noticed that Juvenile Employment (having to do with minors unde 16) is to be abolished. There is one exception to this. Persons 14 to 16 may be employed in any jobs outside of the manufacturing and mechanical industries, and then only for three hours a day. These hours must not conflict with school hours. This shows us plainly that the pledge of code has done away with the desirable juvenile jobs and will throw the juvenile worker who must work into undesirable jobs such as agriculture, domestic service, and street trades. All of these are very hard to regulate and control.

In the New Deal there is one type of juvenile who seems to have been forgotten. He is the motor minded minor who can work only with his hands. It seems that the Educational forces were asleep on the job, or else they were not called on for recommendations. Educational forces would do well to organize and sponsor trade schools for this type of student. Trade schools would take care of the motor minded juvenile and would give him a longer learning period than he now has under the different codes.

As previously stated, when an employer signed the president's pledge, he followed it until his industry as a whole submitted its code. Then from that time on, he was to follow the standards set up by the code of his industry.

Parts of the Retail Trade code dealing with sections pertaining to Juveniles and Juvenile employment follow.
Juvenile Sections
of the
National Retail Trade Code

Article 4.
Section 2 - Child Labor

On and after the effective date of this code, no person under the age of sixteen (16) years shall be employed by any retailer, except that persons fourteen (14) and fifteen (15) years of age may be employed either,

(a) For a period not to exceed three (3) hours per day on six (6) days per week; or

(b) For one day per week, such day not to exceed eight (8) hours. In either case, all such hours of work shall be between 7 A.M. and 7 P.M., and shall not conflict with the employee's hours of day school.

It is further provided, that where a state law prescribes a higher minimum age no person below the age specified by such state law shall be employed within such state.

Article 5.
Section 8. Conflict with State Laws.

When any state law prescribes for any class of employees shorter hours of labor than those prescribed in this article, no employee included within such class shall be employed within such state for a greater number of hours than such state law allows.

Article 6.
Section 2. Juniors and Apprentices.

Junior employees may be paid for the first six (6) months of their employment at the rate of $2 less per week than the min-
The minimum wage otherwise applicable; apprentice employees may be paid at the rate of $1 less than the minimum wage otherwise applicable; it is provided, however, that the number of employees classified as junior and apprentice employees combined, shall not exceed a ratio of one such employee to every five employees or fraction thereof up to twenty (20), and more than one such employee for every ten (10) employees above twenty (20).

Section 3. Part-time Employees.

Part-time employees shall be paid not less than at an hourly rate proportionate to the rate specified in Section 1 of this article for the basic employee work week upon which the establishment by which they are employed has elected to operate.

Section 4. Southern Wage Differential

In the south all minimum wages specified in the foregoing sections may be at the rate of $1 less per week.

Section 6. Conflict with State Laws.

When any state law prescribes for any class of employees of either sex a higher minimum wage than that prescribed in this article, no employee of such class of either sex employed within that state shall be paid less than such state law requires.
Schedule "A"
Supplemental Provisions Applicable only to the Retail Drug Trade and to certain other Retailers in Specified Cases.

Sections 3. Wages

(2) Exception for establishments employing CURB boys or girls.

The minimum wages prescribed in Article 6 above and paragraph (1) of this section shall not apply to curb boys or girls employed by retail drug establishments or by any other retail establishment when such employees are paid upon a commission basis.
PART TWO

THE SURVEY
METHODS USED IN THIS INVESTIGATION

The first general idea of the lines of business in which boys and girls are likely to be employed was obtained by casual and intentional observation and by talking with people of all types and ages. General impressions showed the following lines of businesses and business places to be outstanding in the number of Juveniles employed.

Grocery Stores
  a. Home owned
  b. Chain
Drug Stores
Dry Cleaning Establishments
Laundries
Theaters
Filling Stations
Printing Offices
Garages
Meat Markets
Soda Fountains
Banks
Western Union Telegraph Company
Factories
Foundries
Stores of different types
The next step was to follow up these lines of business with a data sheet that gave definite scientific research. A business executive was interviewed and his data sheet filled out after the interview. This was because it was easier to get a person to talk freely when he wasn't being checked. The Data Sheet follows:
DATA SHEET on JUVENILE EMPLOYMENT

Firm: ________________________________

   School attended

   Reasons for leaving

12. Additional remarks

Date: ________________________________
THE GENERAL TEND OF PRESENT JUVENILE EMPLOYMENT CONDITIONS

There are indications that the employment of young boys and girls between the ages of 14 and 18 is on the decline. There is even a greater decline in the number that withdraw from school to enter upon full-time jobs. On the other hand, the employment of juveniles for part-time jobs has increased in the last few years.

Part-time employment includes work after school hours and work on Saturdays and Sundays. These jobs were found to be along the line of newspaper and magazine selling, delivering, clerking in grocery stores and drug stores, and curb service work. Some of the part-time workers studied in the survey have jobs at filling stations, tire repair concerns, garages. Others are ushers in theatres. All of the people who filled these jobs worked every afternoon, Saturdays, and Sundays. The hours varied with the jobs. It was very noticeable that some of the above mentioned jobs were of the least desirable type and are of the unregulated kind, not subject to control.

Four years ago in the five manual arts shops of The O'Keefe Junior High School a survey was made to find out how much money the boys in the shops were actually making outside of school hours. The boys taken as a group
earned from $900 to $1000 a week. During the entire school year of 36 weeks, about $35,000 to $40,000 was earned by these juvenile workers. This gives one an idea of the large amounts earned by the part-time workers.

It was found that newspaper selling, magazine selling, chain store and grocery store and drug store clerking accounted for the largest percentage of juvenile part-time workers. The reasons for this were: these business do most of their work after school hours, adults will not be employed for such short hours, juveniles will work for lower wages. This accounts for the fact that juveniles in Atlanta is of the following types: street trades, newspaper work, delivery, curb service, clerking, and industrial.
The State of Georgia has a law regulating the work of children in street trades. In 1937 an attempt was made at such legislation. An ordinance was passed which provided that no boy under 16 or girl under 15 be allowed to sell, expose, or offer for sale on the street or in public places newspapers or periodicals. It also forbade any juvenile to sell without a badge, or any juvenile under 15 to sell anything after 8:00 P.M. or before 8:00 A.M.

Any violation of the ordinance is punishable by revocation of the permit, by a fine of from $1.00 to $10.00, by imprisonment for not more than 30 days, or by a fine of from $10.00 to $100.00 or imprisonment of the "parent, guardian, person, or institution" responsible for the child's violation of any of the provisions of the ordinance.

The enforcement of the ordinance had been delegated by the mayor to the juvenile court. One of the newspaper establishments had been up to that time issuing its own permits. For its permits seemed to become just as legal as those issued by the juvenile court. Other newspaper establishments admitted either that they paid no attention to the ordinance in supplying boys with papers, or that they had remained unaware of the exact provisions of the ordinance.
The juvenile court considered its staff too small to enable it to enforce the regulation effectively. The court itself admitted that children under 12 were selling on the streets and that older children were selling without permits.

In 1926 the mayor delegated the enforcement of the street-trades ordinance to the attendance department of the public schools. This department issued permits and badges in accordance with the provisions of the ordinance. It considered that it was powerless to do much more than this. A staff of three attendance officers was too small to patrol the streets regularly. They occasionally picked up newsboys under age or without permits. The director of the attendance department sought the cooperation of the city police department and was promised assistance, but the city police were said to give little or no help. The enforcement was so unsuccessful that the director of the attendance department finally gave up issuing permits for a time. He said that it was unfair to make some boys pay for badges while others sold freely without license. Such procedure, he claimed, was creating hostility toward the department. In August 1927 the ordinance was repealed.

A survey of the Atlanta newspaper interest will show that all of Atlanta's three newspaper houses have a large number of policies in common. There is a gentleman's agreement among them. For instance, each paper has an agreed number of news boys at certain street corners, the number depending upon the traffic at that point. They also station an agreed number of boys at hotels, theatres, etc.

It has also been agreed between the companies that afternoon papers cannot be sold until 11:30, at which time the first edition of both afternoon papers are due to come out. The Constitution's first edition is to go the streets at 9:30 o'clock. The afternoon papers exchange six editions in the course of a day.

The street sellers belong to two groups: one that buys their papers outright and the other which settles up at the end of each day. All unsold papers are to be returned. The boys on the routes are divided into two groups, the independent, and the office collection groups. The independent group buys the paper outright at the rate of 12 cents a week for the dailies and Sunday papers. He assumes all responsibility for collecting. The office collection group is helped by the company. The boys of this group receive a percentage on each paper delivered.
and collected for.

It was also found out that where the routes are not so large and the customers farther apart, the newspaper company allows the carrier a little larger commission on each subscriber. The average size of a route is about 90 papers. Generally smaller routes are handled by smaller boys, or by new boys. Larger routes are given for a reward or as a promotion.

It was found that during the depression, practically the same number of boys were selling and delivering papers as during normal times. At the present time each newspaper has more older boys and men and women selling and delivering than during normal times. This, of course, is due to the unemployment situation. It was also discovered that fewer parents object to their children selling and delivering papers now, than during normal times. The reason for this is that the money earned thus is badly needed in the home.

Besides the regular commission received for selling and delivering the newspapers, rewards are given in the way of prizes, cash money, or trips, etc. These are given for obtaining new subscriptions. Each newspaper company is always having a campaign on. So many points are given for new subscriptions, more points if the subscriptions are paid in advance for one year. Points are given for good service.

As soon as one campaign is over, another is given consideration. During the World's Fair in Chicago, winning
newsboys were awarded trips to the World's Fair. One paper sent some winners to Washington on March 4, inauguration day. Another paper gave $3000.00 in cash prizes in one campaign. The winner of first place received $200.00 in cash plus a percentage of all yearly subscriptions funds paid in advance. Cash prizes brought better results because in most homes the money was more important than the trips.

Although parental consent is necessary for children under 14 years of age to sell papers on the streets, this survey showed that boys as young as twelve years were selling them. Children are not allowed to sell papers during school hours, but they are permitted to begin at two in the afternoon and continue to seven or eight in the evening. There were no restrictions in the number of hours that the older boys or men might sell papers. Some of the older boys and men sell afternoon papers and then continue after 9 o'clock, selling the morning paper. It was found that the Constitution, (Atlanta's only morning newspaper) employs older boys and men since the paper comes out at 9 o'clock at night and deliveries to the homes must be made between three and six in the morning. Most of these newsboys are high school boys or grown men.

It was found that about 350 boys deliver each of the afternoon papers, making between 500 and 700 boys employed between 4 and 6 in the afternoon and who must collect on Saturday. Each afternoon paper had about 200 people selling on the streets. The Morning Constitution had 100 sellers on the streets between 9 o'clock P. M. and 12 or 1 o'clock A. M.
The Western Union is of a certainty one of the largest concerns in Atlanta that hires a large number of young men. At the present time it has 35 boys from the ages of 16 to 21 on its way roll. No boy under 16 or over 25 is employed. In normal times, about 20 to 25 more boys are employed. Only white boys are hired. This policy was adopted on the first of May, 1933, when all colored boys were dismissed.

Around Christmas, during the busiest season when additional help must be added, the boys work in shifts, or what is called split-crews, so many hours on and so many hours off. A large number of the boys make valuable use of their time off by attending classes at the Atlanta Opportunity School and the Central High School. They study reading, writing, English, Arithmetic, Spelling, Bookkeeping, Short Hand, Typing and other general school subjects. All of these subjects are good general foundation builders which will lead to some kind of advancement.

Besides this outside training, the company holds a class once a week for messenger boys, classes on Salesmanship, Courtesy, and general routine work. Instructors for these classes are Western Union Employees, graduates of The Georgia Evening School of Commerce. The company encourages the boys to study on the outside so as to prepare for advancement.
A boy may be promoted from messenger boy to office boy or delivery clerk. For further advancement with the company the boy must specialize in one particular line or another. Large numbers of the boys receive good jobs with other concerns through their contacts with different offices and business men. It was found that the General Manager of Western Union was once a messenger boy. This shows that a boy can advance within the company if he has it in him and tries and studies for it.

About the same general information was found to be true in reference to the Postal Telegraph Company. It was also found out that they have less boys on the pay roll, but the percentage employed is the same as it was in normal times. Relatively speaking, more Western Union boys attend the Atlanta Opportunity School.
During this economic depression when so many of the industrial plants are either closed or running only part-time, the juvenile worker must look elsewhere for employment. The survey found that a large number have gone into clerking jobs with grocery, drug, or 5 and 10 cent stores. Grocery and drug stores employ the largest percentage.

In the chain stores the older boys work as clerks, waiting on the customers or unpacking and restocking goods. The younger boys, who are generally the part-time boys, deliver, run errands, help wait on customers at rush hours. When the younger boys wait on customers the manager or assistant-manager or regular clerk always handles the money. It was found that the boys who were full-time clerks had started out as part-time delivery boys.

It was also found that after some boys had worked full-time for a year or so they felt the need of more schooling. Some would go back to school and carry their old jobs on the part-time basis; others went to night school.

Advancement is based on experience, selling ability, character, and education, all linked together. Practically all promotions were from clerk to assistant manager, then to manager of a store and then to district manager, etc.

In the home-own grocery stores the juvenile worker
is always a delivery boy and then a clerk. Then, if he
can get sufficient backing, he might become part-owner and
then owner.

In the drug stores the younger boys always start
out as delivery and curb service boys. Their line of pro-
motion is the same as the grocery delivery boys'. That is,
if he develops with age and experience he is promoted to
soda jerk. Here his chances for advancement generally
end. In a few cases soda jermers become drug clerks and
then druggists.

There are numerous other clerking jobs such as
working in Woolworths, dressers, and other stores. It was
found that department stores employ a higher type girl
than the 5 and 10 cent stores, though there have been many
girls working in department stores who started out in smaller
stores.
It is very interesting to note that in all the concerns and places of business visited Kress' and Woolworth's were the only ones that were not affected by the economical depression. In fact, their business was found to be better than it was four or five years ago. This is because the buying public has been forced to buy goods at cheaper prices and in smaller quantities. Due to this condition many manufacturers of standard brand goods have to cater to the cheaper stores in order to keep their factories running at all.

It has been said that this greatest of all economic depressions has caused difficulties and suffering to practically all. Due to greatly reduced incomes all classes and types of people have been forced to trade in the five and 10 cent stores. Store managers soon discovered that the old type of sales personnel and organization is inadequate to meet this new type of cheaper trade. It was necessary to replace old clerks with a higher type of sales clerk. This called for a supply of better educated girls. One manager proudly pointed out two college girls and many high school graduates on his clerking force. At the present time the
rule seems to be not to employ any one under 16 years of age and none but high school graduates.

During the month of December stores must increase their sales forces from 200 to 300 per cent. As the data sheet indicates, 20 girls are regularly employed in one particular store, but at Christmas time at least sixty girls are called. In the past these have been mostly school girls, but in the last year or two they have been girls from the unemployed ranks.

It was found that all stores had classes in salesmanship. These were generally held before the stores opened in the mornings. There were any number of girls who attended night school and the opportunity school in addition. There were two or three in one store who attended school in the mornings and worked part-time. Additional educational advantages were urged and sponsored by banquets and "get-togethers," where prominent men and women were invited to talk to the sales force.
The report on employment in the Industrial field is very incomplete because very few juveniles were employed in this field at the time of the survey. So many of the concerns were either closed entirely or were employing a few workers at a time. It was found that those that were open all the time used older employees who had been with the concerns a long time. Seniority rights were observed.

The American Can Company was a good illustration of this. In good times its employees numbered about 300 men, women, boys, and girls. Of this amount about 100 to 150 had been boys and girls 21 years and under - the minimum being 16 years. But at the particular time of this survey there were only 12 men working and these were the older men. This same condition was found in the Atlantic Steel Mill. There the only department running was the mill making steel bands for cotton bales. It was found that these and most of the other concerns worked only when orders were in the office. Although this is the state of affairs in larger concerns, one might think that lesser concerns would employ juveniles; but the smaller concerns likewise used older family men. When younger men were employed they had to be high school grad-
uates. Nevertheless some employers said that they would employ any strong, bright, young man with a grammar school education. Since this economic depression the supply of young men and boys has been so plentiful that concerns can be and are being more careful in their choice of employees. They want high school graduates and young men with talent and ability. When such boys are found and employed, if they show interest and promise, they are sent to larger concerns for information and schooling. This was the case at Cleveland and Browning, an electrical repair concern. They sent one or more boys to the General Electric and Westinghouse plants for further training. They also encouraged these boys to attend night school.

There were a few managers or bosses who said it would be a fine thing if Atlanta had a trade school for young men where they could get training in electrical and radio work, automotive repair, printing, and even foundry work. Practically all places preferred to train their young men themselves but wanted them to study during outside hours. It was thought that persons so trained made the best workers. One or two of the older type of manager said they would rather take a boy right from high school and train him rather than employ a college man. College men were reported impatient and too anxious for promotion before they were ready for it. Several managers favored the "co-ops of The Georgia School of Technology, thinking it fine for a boy to get practical experience while getting an education. The time is coming when the majority of our
schools will be built around vocations and graduates
will step right from the school doors into the indus­
trial and professional and commercial life he is trained
for.
This survey has shown a decrease in Juvenile Employment in Atlanta. If this is the case, what has become of the Juvenile? Now that he cannot find employment what is he doing? As usual, there are a large number on the streets loafing and getting into trouble. We will always have this type of juvenile. According to our newspapers and police records there is a large number of unemployed young folks involved in this crime wave. The young people who have been thrown out of choice jobs and are loafing and walking the streets are easy prey for the older criminal who is always looking for new talent. While, idle, these young people fall into bad company and go out for easy money. Soon, due to their inexperience in crime, they are in the toils of the law. As the old saying goes, "The idle brain is the devil's workshop."

By studying the public school attendance records for the past eight or ten years one will soon see that the majority of the youths who cannot find employment are in school. The figures indicate that the boys and girls who were in school and who would otherwise drop out and go to work are continuing in school, trying to train themselves for a future job.
In the schools we also find the older men who have lost their jobs and must begin over again. In some cases the older man is learning an entirely new trade; in others, he is studying the new methods and ideas and inventions, because he has seen a drastic change in his old trade. The following records of the Atlanta School System tell the story in detail.

Reading from left to right and moving up one block each time will enable one to follow a grade through an eight year period. Of 3382 white children enrolled in the 5th grade, 1924-25 only 1179 reached the 12th grade in 1931-32. While of 3919 in the 1st grade, 2645 reached the 8th in the same period. Lack of data makes it impossible to make the study more extensive. Note smaller enrollment in lower grades: in white schools K, 1, 2, 3, and 4 are lower than 1930-31, 1st grade lowest in seven years.

Census & Attendance Dept.
Atlanta, Ga.
This survey of the juvenile employment situation in Atlanta includes, necessarily, a survey of Employment agencies. The Community Employment Service Bureau was studied. It is a branch of the Atlanta Community Chest and deals with the placement of unemployed men, women, boys, and girls. Its services are free.

It maintains a Junior Division, and it is from this division that the data on the following pages comes. It is interesting to note that this coincides with the other data collected in the survey.

In addition to being a branch of the Community Chest, the Community Employment bureau is connected with the Chamber of Commerce, the Y. M. C. A., the Y. W. C. A., and the Atlanta Public Schools. It cooperates with the schools by finding employment for students who withdraw. Withdrawal cards are sent by the schools to the Employment Agency. The Agency serves both adults and junior to the best advantage of all concerned, and brings employer and employee together in the best way.

Seventy-five per cent of the calls that come into the bureau are for office and clerical help. Consequently there are more girls placed than boys. Fifty per cent of all boys placed are placed in offices. Their
work varies from just an office boy to a stenographer, filing clerk, bookkeeper, or shipping and stocking clerks. Some boys are placed in job printing offices, but never in newspaper positions, because the typographical union takes care of apprentices with newspapers. A great number of boys are placed as delivery or errand boys, waiters, truck drivers, parking lot attenders, Western Union or Postal Telegraph boys.

A large number of girls are placed in offices at clerical jobs, in sales jobs in the five and ten cent stores such as Kress', etc., in switch board operating jobs, typing, and desk information, waitress and restaurant cashier jobs, coffee shop, tea room, and cafeteria, and department store clerking jobs.

The Community Employment Service places very few of its applicants in factory jobs, and those are mostly girls. It seems that most factory jobs are filled by the grape vine method.

About one-fifth of all the placements are in temporary positions, from three to four months in length. At the present time at least 35 per cent of the placements are temporary. Of the 50 people placed in February, only 9 were placed permanently. A temporary position becomes permanent only when the holder studies on the outside.

The bureau uses a follow-up system with all its placements. (see following blank) These letters are
sent three or four months after the placement. In this way an accurate record is kept of placements and their success for future reference.

Information received Community Employment Service, 35 Poplar Street, Atlanta, Georgia.

Attention of _______________________________________

In order to check up on placements we desire some information on:

recently placed with you.

Please fill in answers, sign and return to the

COMMUNITY EMPLOYMENT SERVICE.

1. Is he qualified for his position?
2. Is he satisfactory as an employee?
3. What is his attitude toward his work?
4. Has he capacity for advancement in your organization?

IF NOT SATISFACTORY

5. Would you like for us to place him elsewhere?
6. What line of work would you suggest for him?
7. Please state why he is not making good.

How does the data for Atlanta compare with the data for Georgia and for the United States as a whole? The figures found in other states tell the same story. The figures of the 1920 and 1930 census show that juvenile employment is on the decline and that high school enrollments are increasing.

In the following tables Georgia is near the top of the list in employment of juvenile workers. But in comparing the 1920 census with the 1930 census reports it will be found that Georgia is making strides to cut down juvenile employment. There is still plenty of room for improvement.
### FACTS on CHILD LABOR
(Based on U. S. Census of 1930)

1. **Number of child workers 10-15 years (inclusive)**
   - 667,118—4.7% or 1 in every 21 of the children of these ages in the U.S.

2. **Number of child workers 10-13 years (inclusive)**
   - 235,328—2.4% or 1 in every 42 of the children of these ages in the U.S.

3. **Number of child workers 14-15 years;**
   - 431,790—9.2% or 1 in every 11 of the children of these ages in the U.S.

4. **Occupations of child workers 10-15 years (inclusive):**
   - **Agriculture** ................. 469,497—70.4% of total
   - **Manufacturing and Industries**.. 68,266—10.2% of total
     - Chiefly: Laborers and semiskilled operatives in:
       - Textiles...........20,625
       - Cotton mills.....10,631
       - Silk mills....... 3,596
       - Knitting mills... 3,497
       - Clothing Industries.. 8,650
       - Building............. 7,380
       - Lumber & Furniture... 4,790
       - Food & allied Industries4,324
       - Iron and steel ...... 3,236
   - **Trade** ....................... 49,615—7.4% of total
   - **Domestic & Personal service**... 46,145—7.0 pf total
   - **Clerical occupations** ........ 18,803—2.5% of total
   - **Transportation** ............ 8,717—1.3% of total
   - **Extraction of minerals** ....... 1,184—.2% of total
   - **Other** ................. 6,891—1.0% of Total
     (includes public & Professional)
5. States which have most child workers 10-15 (inclusive)

In the whole United States 4.7% of the children 10-15 years of age, inclusive, are workers. The States having higher percentages of their children of these ages at work are:

- Mississippi: 24.9%
- S. Carolina: 18.3%
- Alabama: 17.5%
- Georgia: 14.7%
- Arkansas: 12.2%
- N. Carolina: 11.2%
- Louisiana: 10.1%

States with the largest numbers of child workers of these ages:

- Mississippi: 68,000
- Alabama: 63,000
- Georgia: 60,000
- Texas: 52,000
- N. Carolina: 51,000
- S. Carolina: 49,000
- Arkansas: 31,000
- Louisiana: 27,000
- Tennessee: 26,000
- Pennsylvania: 24,000
- New York: 20,000
- Kentucky: 18,000
- Virginia: 15,000
- Missouri: 24,000
- Florida: 12,000
- Illinois: 12,000
- New Jersey: 11,000
- Massachusetts: 10,000
- Oklahoma: 10,000
Limiting the figures to occupations other than agriculture, 1.4% of all the children of these ages in the United States as a whole are found in such occupations. The States having higher percentages of their children of these ages at work are

STATUS OF THE ADOLESCENT GIRL
POPULATION IN THE UNITED STATES

The study of the juvenile girl worker is an interesting one. The figures from the Industrial Division of the Children's Bureau of The United States' Department of Labor are more complete and interesting than those found here in Atlanta. The data sheets of the survey indicate that most of the girls in Atlanta work as clerks and a few work in factories and at odd jobs. The colored people do most of the domestic work in the South; consequently, there are very few if any white juvenile girls employed as domestic servants.

In reference to the adolescent girl problem, there are a few questions which we need to have answered: How many of these girls are there? Where do they live? What do they do? What is the relative proportion of country and city girls employed. Is this proportion changing? How many girls are employed? Is the number in industry and business increasing or decreasing? Are more attending school than formerly? How many are neither employed or in school?

There were in 1930, according to the census, over 4,500,000 girls in the age group 14 to 17 inclusive. Of this number approximately 3,400,000 or 58 per cent, lived in urban communities, that is, cities and towns with a population of 2,500 and over. 872,625, or 19 per cent,
lived in smaller towns and villages; and 1,368,111, or 29 per cent, lived on farms. The corresponding percentages of the entire population living in urban areas was 56 per cent; in villages, 19 per cent; and on farms, 25 per cent. It will be seen that relatively more of these girls than of the entire population were living on farms. This was particularly true of those 14 and 15 years old. The proportion of girls of 16 and 17 years who lived in farm areas was smaller than of the younger group.

In the last decade there has been a widespread belief in the need of more education to meet the requirements of our new complex civilization. Naturally, we would expect that the girl population in schools would increase. It did in crease from 1920 to 1930. There were 63 per cent in school in 1920 and 73 per cent in 1930. The proportion, as shown in the table, varies considerably in different parts of the country. In 1930 the Pacific Coast, the mountain states and the Northeast Central states ranked highest in school attendance, and the South Atlantic States ranked lowest. Generally, it was higher in urban than in rural communities.

In the country as a whole, over 3,400,00 girls, almost three-fourths of the entire age group, were attending school in 1930. Though we are not sure of all the types of schools attended, most of them were secondary schools. The reports from the U. S. office of Education, the only source of information on this point, show that for the school year 1929-30
about 2,690,000 girls enrolled in secondary schools. Some of them undoubtedly were less than 14 years of age and therefore not included in the group under discussion. 510,000 of these girls were in junior-senior high schools, 290,000 in senior high schools, and 1,382,000 in regular four year high schools.

To sum up; 730 out of every 1,000 of these girls were in schools of one sort or another; 140 out of every 1,000 were employed; thus, girls in school and girls employed cannot be set off against each other in two distinct groups, for those attending school also had jobs. It is therefore not known how many were neither in school nor at work. Owing to the acute employment situation, it is certain that at the present time the number who are without employment or school affiliation is unusually large.

Of the approximate 650,000 girls at work, only about a fifth were 14 and 15 years old, the age when law and custom both tend to keep the girl in school. Both the number and the proportion at work increase with each year of age; at 14 only 40 girls out of every 1000 were working; at 15, 76 were; at 16, 170; at 17, 275.

The working girls 14, 15, 16, and 17 years of age were engaged in many different occupations and industries. Chart 1 gives a picture of their distribution in the main occupational divisions in 1930. Manufacturing and mechanical industries claimed the largest proportion—200,000 or
nearly 1/3; one-fourth (160,000) were in domestic and personal service; one-fifth (130,000) were in agriculture; one-eighth (30,000) were in clerical occupations; 50,000 were in trades (including stores); 18,000 in transportation and communication (which includes telephone and telegraphic service); 9,000 in public and professional service. In manufacturing, a large proportion of the girls were in textile industries, cotton, silk, rayon, knitting, and hosiery mills; many more were employed in the clothing and food industries. The younger group of girls in trade were mainly messengers and cash girls and bundle wrappers. The older group, those over 16, includes many sales clerks.

Although the population of girls in the age group under consideration increased 20 per cent between 1920 and 1930, the total number employed in all occupations decreased by 23 per cent. The largest decreases took place in the clerical and transportation and communication groups; each dropped 40 per cent. Employment of girls in manufacturing fell off a third, and employment in trade more than a quarter. A comparatively slight reduction was shown in agriculture. The only one of the occupational groups which showed an increase was the domestic and personal service. These numbers increased one-third.

Part of the reduction in the numbers employed was due to the greater holding power of the schools with their more diversified programs and to the child labor laws. However,
the fact that the number of girls employed in domestic service and personal service and increased while the number employed otherwise has decreased proves that employment opportunities for young people, which are so scarce today, were already becoming scarce in 1930. Jobs as telephone operators, store clerks, and stenographers were becoming difficult to obtain. Personal and domestic jobs, the least desirable of all, in which the demand was always greater than the supply, have provided necessary openings during the depression.

Except for those employed in agriculture, about as many 14 and 15 year-olds as 16 and 17 year-olds, the large majority of the working girls in 1930 were in the older group; 19 per cent of the girls 16 and 17 worked in non-agricultural occupations and 3 per cent of the 14 and 15 year-old girls. In so far as the younger girls worked, they worked chiefly in factories and domestic service. While a majority of the older girls were also in these two occupational groups, 57 per cent being employed, they were better represented in clerical work, transportation and communication than were the younger girls.

It is obvious that employment opportunities have suffered least in the Southern States where the largest proportion of the girl population is employed. The num-
number of girls in non-agricultural employment— in which employment considerably more than half used to be engaged—had fallen by 1 per cent in a decade in the South Atlantic States, which stretch from Delaware to Florida. The number of girls in manufacturing and mechanical pursuits in these states actually increased 4 per cent while decreases elsewhere ranged from 53 per cent to 10 per cent.

Two decades, even one decade ago, the child labor problem was complicated by the presence in relatively large numbers of immigrant children and children of recent immigrants. In 1930, however, foreign-born white girls constituted only 4 per cent of the working girl population. In addition 1.4 per cent (9,000) were of Indian, Oriental, or Mexican origin. Most of the 25,000 foreign-born white girls were in the Middle Atlantic, New England and East North Central States. The 9,000 girls of other races were found chiefly in the Southwest and in the Mountain and Pacific Coast States. A fifth of our girl workers (130,000) were Negro, ninety per cent of them were found in the South. The number of Negro girls employed decreased only 10 per cent in the decade as compared with the numerical decrease of 22 per cent among the native white girls at work.

Even the most general survey of the census figures for these young people helps toward a realization of the distinct and diversified needs of this group of over four and a half million girls, with different racial and community back-
grounds. It is especially important, moreover, in this period of economic stress, that groups who are dealing with the problems of young girls and attempting to guide them wisely should be aware of the new employment and educational trends growing out of rapidly changing industrial conditions.

PART FOUR

RECOMMENDATIONS
THE CHILD LABOR LAWS

Child labor in the United States has been regulated by the child labor laws of the various states. At the present time there is no federal child labor law. Two former federal child labor laws were once enacted with the object of bringing about a national minimum standard of protection of child labor legislation and its enforcement throughout the United States. They were declared unconstitutional.

A proposed amendment to the constitution is now before the states for ratification. It would permit Congress to enact a child labor law. The following states have voted on and approved the amendment: Ohio, Oregon, Washington, North Dakota, California, Arizona, Wisconsin, Montana, Colorado, Michigan, New Hampshire, New Jersey, Illinois, Oklahoma, and Arkansas, Iowa, West Virginia, Minnesota, Maine. It is expected that a large number of the other states will pass on it soon due to the N. R. A. Code and the Roosevelt administration which is making a vigorous attempt to abolish child labor.

Most every state now has some kind of child labor legislation, the laws varying greatly both as to adequacy of provisions and effectiveness of enforcement. Therefore it is necessary to have a uniform law.
A good child labor law should do the following: (1) Fix a minimum age for work high enough to give every child adequate opportunity for physical development and educational training. (2) Set a physical standard that a child must attain before he enters upon employment. (3) Prohibit excessive hours and hazardous occupations for employed children.

The following are suggested minimum standards to be met by all children before they are permitted to leave school and go to work:

(1) School attendance for at least 8 months a year until the age of 16.

(2) A minimum age of 16 years for full-time employment.

(3) A physician's certificate of physical fitness.
RECOMMENDATIONS FOR CHILD LABOR LEGISLATION

Recommended by the Washington Conference on December 11, 1932, as especially needed at this time because of the widespread unemployment among adults and the developing pressure upon established labor standards:

(1) Age and hour regulation.
   
   (a) A basic 16-year minimum for all gainful employment, with certain exceptions of carefully selected occupations for the 14 and 15 year old group outside of school hours, and with some suitable provision for the group not able to profit by the ordinary school program up to the age of 16. (In view of new types of child employment, the occupations covered by legislation need special consideration so as to make certain that all employed children are given protection.)

   (b) Maximum hours of labor for minors under 13 shorter than the prevailing hours of adults and in no case more than 3 per day.

(2) Hazardous Occupations.

   (a) Eighteen year minimum as recommended by the Advisory Committee on Employment of Minors in Hazardous Occupations.

   (b) Provision for payment of double compensation in
PREVENTING CHILD LABOR
THROUGH SCHOOL ORGANIZATION

The desire of children to leave school is due in many cases to the failure of the schools to individualize the school program so that the needs of all types and grades of ability may be met. With the raising of the compulsory school age many children are kept in school who are not fitted by temperament or ability to profit by school courses of the traditional type. The result of their inability to adjust themselves to the type of instruction offered results in failure and retardation, and dissatisfaction with school. In some cases personality defects of a serious order are caused. Especially would this be true in the cases of children of low average or barely normal mentality. Most studies of young working children show that although a small proportion are above the average in intelligence, they are on the whole of some what lower intelligence than children who remain in school. To compel these children to remain in schools for which they are unfitted and in which many of them are condemned to hopeless failure is a serious matter, especially in the light of recent knowledge regarding the relation between failure and problems of personality and conduct. On the other hand, such children are often in greater need of supervision and protection during
the early years of adolescence than the better endowed mentally. They should be provided with the type of training which would mean real development for them. Unless such training is provided in the public schools children who are somewhat handicapped at the start will be denied equality of opportunity with other children.

Certain outstanding improvements should be made in the schools for the prevention of child labor.

(a) Individualization of public education. This would provide profitable training for all children up to the legal age for going to work. This must be accompanied by measurements of the intelligence and analysis of the personal characteristics of all school children in order to guide them into the kind of training for which they are best adapted.

(b) Vocational Guidance. The provision beginning early in the school course of an adequate program of educational and vocational guidance. Such a program would include the following:

1. A sufficient number of well trained and experienced counselors in the schools to make adjustments for every child that will prevent discouragement and will prolong school life.

2. Authentic occupational information given to all children to help them in their choice of occupation. Fitting the individual into the right occupation is basic to individual as well as national success and
happiness.

(3) Assistance in finding positions for all children leaving school for work and employment; and supervision of the early years of their working life.

(c) Provision of pre-vocational, vocational, and special training. This would include try-out courses, vocational courses, and special training for the physically and mentally handicapped. In spite of trained expert counselors, unless provision is made, there cannot be for the child the adjustment that will best develop his interests, powers and abilities.
NEWS FROM THE STATES

Plans for Child-Labor Legislation in State Legislatures

CALIFORNIA

Plans are being made for the introduction of an improved street trades law.

COLORADO

A bill will be introduced to amend the existing child labor law. It will provide for raising the school-leaving age to 16 and for the improvement of other standards.

CONNECTICUT

The Governor's message.-- The message of the Governor contains a section on the menace of the sweatshops, "which have come upon us," he says, "like a cloud of locusts in order to escape the more stringent labor laws of the neighboring States, migrating from place to place in order to evade such labor laws as we now have." Existing statutes have been found to be inadequate. He therefore recommends a 48-hour week for women and minors in all industrial and mercantile occupations and a minimum wage law for minors. (Women's Wear, New York, Jan. 5, 1933.)

The commissioner of labor has proposed a legislative program including these items and in addition adequate appropriations for the labor department; a law requiring registration of factories with the labor department.

ILLINOIS

The Illinois Child Labor Committee, the League of Women Voters and other organizations are considering ratification
of the child labor amendment, and the introduction of bills to raise the school leaving age to 16.

KANSAS

A resolution to ratify the child labor amendment has been introduced. (House Concurrent Res. 5.)

MARYLAND

Groups are promoting a bill to protect migrating children working in the State, based upon measures adopted two years ago by Pennsylvania. (Vocational Magazine, Jan. 1933.)

MASSACHUSETTS

The Massachusetts Child Council is cooperating with other groups in behalf of improved child labor legislation. A bill prohibiting the employment of minors in a long list of hazardous occupations has been introduced. The Massachusetts Women's Trade Union League is backing this bill and raising the school-leaving age to 16. (Boston Globe, Jan. 12, 1933.)

Labor Conference Called-- Governor Ely of Massachusetts has invited the governors of 12 States to send their labor Commissioners and such other members of their labor departments as they designate to a conference in Boston on Jan. 27, 28 to consider ways and means of effective cooperation in establishing uniform labor laws. The States represented will be Connecticut, Delaware, Maryland, Massachusetts, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, West Virginia, Maine, Vermont, and New Hampshire. In his call Governor Ely suggested "that the main subjects for consideration be how Eastern States can effectively cooperate to achieve greater uniformity in laws
regarding the hours and time of employment of women and children more effective regulation of the wages paid to women, particularly in the so-called 'sweated industries', and improvement in the public employment office service of the individual States. (Boston Evening Globe, Jan. 9, 1933#)

The Massachusetts Special Commission on stabilization of employment recommended to the legislature that the compulsory school attendance age be raised to 16 in two one year steps beginning in 1933, and that the Federal child labor amendment be ratified by Massachusetts. (U. S. Daily, Dec. 16, 1932.)

MINESEOTA

The Minnesota League of Women Voters is sponsoring an amendment to the street trades law which would place the responsibility for violation of the law upon the employer instead of merely permitting the children to be adjudged delinquent by the court.

NEVADA

The State Federation of labor will sponsor advances in child labor legislation.

New Hampshire

Governor's Message-- Governor Hinant in his inaugural address declared in favor of a 48-hour law for women and children in industry, and expressed hope for maintenance of a living wage scale. "If any measure of human progress", he said, "is justified as a result of the experience and misery of people during this cycle of national depression, it is the abolition of child labor". (Manchester, Union, Jan. 6, 1933).
NEW JERSEY

In New Jersey the following moves have been initiated by the consumers' League to improve legislation; Mandatory minimum wage; 8-hour day and 44-hour week for women (this would affect girls over 16); adequate enforcement of labor laws.

NEW YORK

Governor's Message—Among the recommendations of the Governor of New York to the legislature are: The establishment of an advisory minimum wage board for women and children in private industry; a shorter work week; raising the minimum age for child labor; the laying down of a definite policy as to the standards of education the State is willing and able to maintain. "We dare not allow that standard to be too low," the Governor says, but it may be necessary to make a cut in the budget for education for the coming year. This cut "must not be too drastic." (New York Times, Jan. 5, 1933)

The following program for New York was formulated:

1. Minimum age of 16 for all gainful employment (with school leaving age raised to same level), allowing limited exemptions for employment of 14 and 15 year old minors outside of school hours.
2. Regulation of the employment of minors between 16 and 18 by the issuance of employment certificates; reduction of hours of male minors.
4. Mandatory minimum wage legislation for minors.
Labor Standards Committee—At a conference of representatives of more than 50 organizations held in New York on January 9, under the auspices of the Consumers League of New York, a New York Labor Standards Committee was created, which is drafting bills providing for a 44-hour week and a minimum wage for women and children. These steps were urged by the conference as essential for the rehabilitation of American labor standards, in view of evidence of the beating down of wages to sweatshop levels in an effort to meet acute competition and the demand of consumers and chain stores for lower priced goods. Wage of 8 and 10 cents an hour to women and of 10 to 15 cents an hour for men were revealed in two studies made recently by the Consumer's League, it was reported by Mrs Elimore M. Herrick, the league's executive secretary. "Despite appalling unemployment," Mrs Herrick said, "those with jobs are being worked unprecedentedly long hours. Violations of the hours of labor law are constantly mounting. In Brooklyn, girls in factories earn $3 a week where $8 to $12 was being paid before. Rates for domestics have been cut in half, so that even if they can get work to do they get so little for it that it is hardly worth while." (New York Times, Jan. 10, 1933.)

NORTH CAROLINA

The Legislative Council of North Carolina Women, made up of representatives of the State Federation of Women's Clubs, Federation of Business and Professional Women's Clubs, The League of Women Voters and other organizations, is sponsoring five measures aimed at the further protection of working child-
ren; (1) completion of the sixth grade before going to work; (2) raising the school-leaving age to 16 unless children are regularly employed; (3) elimination of the poverty-exemption to the 8-hour day for children under 16; (4) prohibition of night work for minors under 18 and women; (5) establishment of a women's and children's bureau in the department of labor with adequate enforcing and investigatory powers. (Raleigh, N. C. News Observer, Dec. 18, 1932.)

NORTH DAKOTA

Plans are being made for ratification of the child labor amendment, and the raising of the school-leaving age. (Voc. Guidance Magazine, Jan. 1933.)

OKLAHOMA

The labor commission has recommended the following improvements in child labor standards to the legislature: An 8th grade school attendance standard, a minimum wage law and ratification of the child labor amendment. (Bulletin 10a, Oklahoma Department of Labor.)

PENNSYLVANIA

Plans are under way for promoting child labor legislation in the present session of the legislature. Two and possibly three sectional child labor conferences will be held -- one in Philadelphia, one in Pittsburg, and possibly one in Scranton. Bills raising the school-leaving age to 16 and fixing an 8 hour day and 44-hour week for minors under 16 will be introduced.

The Philadelphia Women's Trade League is calling a child-labor conference for February 18 at Bryn Mawr College to consider the emergency program recommended by the national conference.
A resolution to ratify the child labor amendment has been introduced in the legislature. (H. J. Res. 213.)

RHODE ISLAND

The Governor's Conference on Employment and Relief recommended in its report that child labor should be discouraged because it "increases adult unemployment at all times and especially during periods of depression," that supervision of employed children under 16 should be established by extension of the employment certificate requirement, and that provision should be made for educational opportunities for unemployed children under 16. (Report of Conference.)

Governor's Message--Among the recommendations contained in the message of the Governor of Rhode Island are the following: Reorganization of the State factory inspection department to provide for the employment of qualified inspectors, and for the creation of an industrial-hygiene bureau to study industrial accidents, occupational diseases, and conditions of work surrounding women and children in industry, and to plan and to conduct safety education programs.

TENNESSEE

The congress of Parents and Teachers is leading a movement for a street trades law. (Vocational Guidance Magazine, Jan. 1933.)

UTAH

A child labor bill raising the minimum age for employment and otherwise strengthening the child labor law is being supported by the State League of Women Voters, the Utah Federation of Labor, and other groups.
WASHINGTON

A recommendation to the legislature for ratification of the child labor amendment was included in the Governor's inaugural address. A committee composed of representatives of the American Legion, the State Federation of Labor, the State Federation of Women's Clubs, the Women's Legislative Council, the Washington State Grange, and other organizations are planning to press ratification at this session.

WISCONSIN

A bill raising the school-leaving age to 16 will be introduced.

Collectec from bulletins and clippings throughout the United States.

Reasons for leaving

**12. Additional remarks**

The constitution employe's mostly older boys & young men due to the time the paper comes out. See next page for details.
Additional Information
of
Atlanta Newspapers

General Policies:

A. Standard hours for street sales
2. Constitution no street sales before 9:00 in the evening.

B. Main offices to control corners, streets, Hotel, etc stations.

C. Street Sellers
1. Those boys who buy their papers outright.
2. Then the older more reliable boys who settle up at the close of each day.
3. All unsold papers may be returned.

D. Boys with routes
1. Independent Group. (Where boys buy papers at a certain rate make all collections themselves)
2. Office Collection Group. (Where boys work on a commission or percentage basis and office helps make collections)

E. Promotion or Advancement
1. New boy given smaller route first.
   (These routes have fewer customers and are far apart)
2. For promotion they are given larger or routes with more customers.

F. Awards for good service and new customers secured.
1. Georgian trips as to Florida, Washington, D. C., Chicago, South America, and different places in the country. The latest is for scholarships for a College Education.
2. The Atlanta Journal General give rewards in cash as $3000.00 or $200.00 for first and then proportional down.
3. The Constitution Cash rewards.

G. General Information
1. The Constitution hires mostly adults and older boys on account of the hours in which the papers come out.
2. Practically same number now selling and delivering papers as before the depression.
3. Less objection from parents of boys selling and delivering papers now than a few years ago due to the fact that the money is needed in the home for maintenance.
4. No one under 12 supposed to sell papers on the street, though some do with the consent of parents.
5. No children supposed to sell papers on the streets during school hours.
6. Some parents take children with them when selling on the streets.
