**Woodings Cafeteria Has Free Bus Service**

Effective Monday, July 14, at the lunch hour, a new service will be offered. Tech students by Woodings Cafeteria. Free bus service will be supplied to and from the campus to the cafeteria. Here is how it works. A special bus rented from the Georgia Power Company will stop at North Avenue and Techwood, at the YMCA, and at the corner of Luckie and North Ave. This bus is marked by a sign reading "WOODINGS CAFETERIA SPECIAL." Upon boarding the bus the student buys one or more meal tickets at 25¢ each which are good for that amount on his bill and for free transportation to and from the cafeteria. During the lunch period the first bus leaves at 11:05 with the next leaving at 11:20 and so at fifteen minute intervals until 12:50. In the evening the first bus leaves at 5:15 and every fifteen minutes until 7:15. It is to be noted that these schedules are subject to change for the necessity of the Tech students. A trial run was made recently and it was found that forty-five minutes would be the required time for the entire trip. This allows thirty minutes to leisurely enjoy your meal and fifteen minutes for the round trip.

**Veteran Pay Stops Automatically On August 30**

The summer term will end on August 30, 1947, and the registration for the fall term will occur on September 25, 1947. Thus, all veteran students will automatically be interrupted as of the end of the summer term, August 30, 1947. Regulations of the Veterans Administration state that veteran students are entitled to 30 days leave each year which accrues at the rate of 2 1/2 days per month of training. This leave, if asked for, will be granted by the Veterans Administration. If not asked for, it will not be granted. If leave is asked for and accepted, the time given will be charged to the entitlement time of the veteran.

Therefore, all veterans who desire this accrued leave during the interim time between the summer and fall term, are urged to secure the official request now from Mr. A. A. McDonald, Training Officer, Room 117, Swan Hall. At this meeting plans for an outing around the city will be discussed and Tech students and Tech wives are requested to be present.

All former Co-ops who plan to get a Co-op degree are requested to give their names to Miss Green in the Co-op office.

-- The Technique --

**Woodings Cafeteria**

Woodings, noted throughout Atlanta for its most delicious food at most reasonable prices, is located at 30 Marietta St. It is a modern air conditioned cafeteria seating 300 persons with two serving lines. Every day at alternate hours, Graham Jackson, tal-\nted Negro pianist entertains helping to create a lively and comfortable atmosphere. Fresh vegetables grown on the Woodings Farm are a special feature.

At the present time this is a five day service. However, if there were an adequate demand, service would be supplied on Saturdays as well.

**Tech Neumon Club Lists Special Plans For Fall Schedule**

This is the second in a series of articles designed to acquaint the students of the various campus organizations of Georgia Tech with the special plans for the fall which are of particular interest to them.

There are several religious organizations on the Tech campus, one of the oldest and largest of which is the Catholic Club. Its purpose is to promote the mutual interests of the Catholic students at Tech through social intercourse of a cultural, intellectual or social nature. Its activities consist of a program of religious education in the form of talks and open discussions, supplemented by social functions of a recreational and fraternal nature.

The club has many ambitious plans for the fall quarter including two of a religious and social nature. Under the heading of religious and social events there will be talks by local businessmen, retreats to Trappist, and the current church series. The club has also been meeting regularly and regional Newman Club meetings. Under the heading of social events there will be dances, picnics and swimming parties, movies and other social gatherings. There will be a great variety of both social and religious events than ever before in the club. Invitations for these events will be broadcast to all Tech students. The Newman Club will be devoted to business while the other will be devoted to movies, religious talks, interviews of local men of importance, and other items of interest to the club members.
Industrial Organization, Management
Text of Address by Prof. Groseclose

Prof. Frank F. Groseclose, Head of the Industrial Engineering Department, spoke on the Basic Principles of Industrial Organization and Management at a joint meeting of A.I.E.E. and Alpha Chi Sigma last Tuesday night. Outlining the purposes of industrial organizations, Prof. Groseclose compared the administration of an organization to the nervous system of the human body.

He discussed in detail the five main types of organization and their development from the直线行, or military organization, through staff and functional types down to the present day Line-Functional Staff-Committee type of organization. It was shown that committees are advantageous as they develop clarity of plans, prevent hasty decisions, present ideas for criticism, and promote working coordination among executives. Prof. Groseclose remarked, "Two heads are better than one, provided they disagree."

He stated that a good executive must organize, deputize, and then supervise. For efficient management a senior executive should have no more than five or six junior executives responsible to him. In this manner a senior executive can give each junior executive the proper time and necessary attention.

Prof. Groseclose brought out clearly that management-personnel relations are very important in the administration of any industrial organization. Management must develop a person to operate a machine as well as a machine for that person to operate.

He said an industry cannot be organized if the personnel and their human relationships must be given due consideration.

Prof. Glenn Rainey Speaks On Fascism
To Tech AVC Group
"Unemployment," says Prof. Glenn W. Rainey, "is the primary cause of fascism—the hopey-mopes of communism."

Mr. Rainey made the statement in the address of a machine, but the people and their human relationships must be given due consideration. He brought out the fact that five years after graduation most engineers, except those who enter the field of research, will be doing work sixty-five percent of which will require technical knowledge and seventy-five percent of which will require administrative ability and the ability to get along with and understand people.

He concluded the organization chart of Ga. Tech was used to illustrate the main types of industrial organization.

Tech's ROTC Students Continue Army Training
Four Hundred Fifty Air ROTC students completed their fourth week of a six weeks summer camp today at Keesler Field, Mississippi. Students are from the following universities in seven southeastern states: Alabama Polytechnic Institute, University of Alabama, University of Florida, Georgia School of Technology, University of Georgia, Mississippi State College, University of Mississippi, North Carolina State College, The Citadel, Clemson Agriculture College, and the University of Tennessee.

The Air ROTC consists of organizations at selected colleges and universities to provide a program for qualified students, leading to a commission in the Air Force. Training in the ROTC extends over four academic years, including attendance at a six week's summer camp, where practical application is made of theory learned in school, with additional instruction not feasible during the regular college courses for the Air Reserve.

In addition to producing college trained officers for the Air Reserve, Air ROTC officers will be furnished to air units of the National Guard and for the Regular Air Force. The duration of the summer camp is six weeks or 240 hours of training. Students of the Keesler Field summer camp will study leadership and military courtesy, teaching techniques, organization and functions of an AAF base, Air Force tactical techniques, military information, infantry guard duty, close order drill, tactical training of the individual soldier, parade and ceremony, marches and bivouac, weapons and marksmanship, physical training, and specialized on the job training.

The Air ROTC Summer Camp at Keesler Field is being held under the jurisdiction of the Fourteenth Air Force located in Orlando, Florida; under the command of Brig. General Leo A. Walton. This camp is one of eight being held at various points throughout the United States.

The following students are from Georgia Tech:

IM Classes Receive Quality Control Talk
Mr. Edward W. Windish, Assistant Chief Inspector for the Navy in the Southeastern area, delivered an address upon "Production Quality Control and Inspection" last Wednesday, July 9, to the IM 401 and 302 classes.

He emphasized the fact that Quality Control holds a rank in industry equal to the production managerial, and sales factors. Quality control is based upon statistical sampling of items in production. Mr. Windish added that, at present, too many managers fail to realize its economic worth.
Savannah Students Protest Disbandment Of Branch College
By Walt Miller

An excellent example of school spirit is being shown by the students attending the University of Georgia branch at Savannah. The students at the Savannah branch have been in an uproar since the regents announced plans for closing that branch. The students, led by Charles Thau of Savannah, have adopted an 18 point resolution stating the reasons that the branch shouldn't be closed. This 18 point resolution which is going to receive wide circulation, accuses the Main University at Athens of everything in the book from, "do-suth­ ing attitude" of the officials, to accusing the janitors of helping the students get the pizzas.

Anti-Athens Petition
The devotion to their dear alma­ mater is so strong that the students circulating a petition declaring that they will do without an education rather than go to Georgia. Sentiment is so strong for the branch, that it is predicted by Thau, that every stu­ dent at the Savannah branch will sign the petition when he is given the op­ portunity.

Death for S.W.A.
It was inferred that a move would be taken to disband the Student Wel­ fare Association which is threaten­ ing to protest the proposed inves­ tigation of the Athens officials.

But this will very likely never happen. There's one big hitch in the plan. People in Boston wouldn't be getting any mail.

Student Council Minutes
July 8, 1947

The meeting was called to order by President Bausten at 7:10 P. M. with 13 members present.

The roll call was followed by the reading of the minutes of the last meeting which were approved as read.

The motion by L. Barnes that H. Woodham be appointed an observer at the Georgia-Alabama Regional meeting of the National Student Organization was carried.

There was a discussion of the freshman smoker and the policy for orientation of new freshmen.

C. Hobbs was appointed to investigate the buzzer and whistle system to see if improvements can be made.

With no further business, the meeting was adjourned at 7:45 P. M.

Respectfully submitted,
John V. Miller
Secretary.

Czechoslovak Student, Ivan Viest, Attends Tech

By Jim Williford

And outstanding example of the international goodwill policy so heartily endorsed by our government is present on the Tech campus. This example, by name, is Ivan Viest (pronounced Vye-et), exchange student from Bratislava, Czechoslovakia. He plans to attend the graduate school of civil engineering on the Tech campus after the fall under a Rotarian scholarship.

He came to the U. S. April 10, 1947, highly recommended by the Slovak Technical University in Bratislava, His academic record is a little short of amazing, as evidenced by the passing number of "As" on his transcript. His mental ability was further proven when he passed both the first and second state examinations with honors.

Besides these scholastic achievements, he was president of his student council and of other organizations in which he took part. There is little doubt—by his engineering background of pre-

Sleepers Local Union To Be Organized Soon

By Walt Miller

In this world of unionization, when everyone is making a fortune by being the boss of a union, I have decided to organize a "Students Local of the Unionized Sleepers." The purpose of this union will be three-fold:

1—Quieter classrooms.

2—Refuse to permit instructors to lecture loud enough to keep anyone from sleeping.

3—The abolition of all quizzes on the grounds that it is impossible to sleep while taking a quiz, and sleeping is a constitutional right.

I realize that every organization must have something definite to offer for a program of activities, therefore my union will sponsor the following program and anyone who does not live up to these conditions will be forced to remain awake during all lectures for one day. Only the following three methods of sleeping will be permitted in classrooms.

Although the first method allows the most relaxation, most professors frown upon it. Any student who sits on the back row next to a couple of empty seats may use it, but each student will be required to bring his own mattress to class.

In any classroom in which the professor does not object to sleeping, I recommend the sprawl position since this position consists of placing one leg on the lap of the person sitting next to you and the other leg is placed, with the utmost of care, in the face of the person in front of you. Emily Post says that it is impolite to stick your shoe in another person's face, therefore it will be unnecessary to place the shoe off and place the smell in his face.

The third method is for the new professors who fail to cooperate with our program and insist that everyone stays awake. The only method of getting sleep under these conditions is

(Continued on page 11)
Honesty in college is just as important as honesty in any other social group. Money is the medium of exchange is money. People who steal it are pointed out and punished.

In the classroom the modus of exchange is learning. He who steals it should be pointed out and punished.

This is comprehensible to me that any educational institution should conduct its classroom work on any basis other than the honor system. If a student is unable to pass courses on the basis of what he knows about him he certainly should be pointed out to punish his iniquity at cheating.

The student in the classroom may well be expected to follow through and cheat when he enters business or a profession. To allow a student to consider himself not bound to pass his course because the professor or instructor didn't catch him is to implant a poisonous weed in his character which will grow and stifle honest impulses and actions.

An undergraduate at Emory University I was instrumental in establishing the honor system in that institute back in 1919. As president of the war department in 1920, it was my unpleasant duty to expel two students for cheating. My conscience never bothered me about this case because I firmly believe in the honor system and had little sympathy for those who didn't want to follow the rules.

Many students feel that to report a classmate for cheating would stamp him as a stool pigeon and to be regarded as a traitor by his fellows.

The statement that these rulings came at a late date are to be matched with the fact that, according to President Batten, the T.C. Council of Student Rules and Regulations and have been since about the year 1920. They were not applied during the war, 1942-1945, so it seems to be a very late date in the quarter for such drastic rulings. It is also evident that the number of "cheating, beatin' students into summer school."

Depression Danger
By Cecil Johnson

Something should be done now to avoid, or at least soften, the depression that comes as an aftermath of the present, student economic boycott to make it reasonable to expect that a period of depression will follow this war as it has followed the others.

During World War II and for a short time afterwards we had in this country a system to work and hurst the demand of consumer goods resulting from war production. Maybe this system isn't the best we could have in 1945, but at least it was an attempt to do something with the demand. It was a carefully planned regulations to keep the plan afoot things is the application. Without the plan a needed a working and over a correction of its faults because it was created as an emergency war measure. If it didn't work, a new plan should have been made to function during a time of peace. This new plan could have been made out of the old plan to make the old plan a new plan.

The disappearance of the original plan is evident in the past few months. By relaxing the controls by the decision to cash the veteran's terminal disability check and reduce income tax, the government has moved on to the second phase of survival. These are: (1) The fair measure that the children, women, and men, (particularly the male) of the United States, and the schools and unnatural deaths during the next decade. (2) The technical and economic instability is the real thing that sustains us will be wiped out, to be replaced by a new system—system of fee

In the off-campus world the medium of exchange is money to satisfy their demands, but the supply is normal life of an American prior to 1941 and the third depends upon complete destruction. The first depends upon our old method and refuses to the event at Hiroshima.

It seems to me that one of the finest things a person can do is to make something better. An economic system to make something better. An economic system

In closing the article, the author writes, "I view with suspicion those who argue against the honor system. Their very activity is suggestive as to whether certain circumstances they would make an illegal lift to improve their scholastic average or pass a course. It seems elementary to me that the sincere, conscientious student who wishes to improve his mind and character by the process of getting an A or an "A" at the recognition of the student government in 1920, it was my unpleasant task to make the old system more just and fair. The second, the acceptance of it as inevitable. And the third depends upon complete investigation of the statements.

The first and second are obvious—one of the normal life of an American prior to 1941 and the other based on the theories of Omar Khayyam. It is to the third that more consideration should be given, for it is this one that the statement may be made false.

Mr. Istris has suggested that investigations be considered as a postgraduate course, one named Survival 501-2-3. The first step consists of studying the fundamentals of the atomic bomb. Most students are familiar with these, and may move on to the second phase which is to actually make the event at Hiroshima.

Unfortunately, the latter phase has no test book, and each one must dig out his own material, and, in most of his views from the text book. Mr. Istris himself those in positions to evaluate properly the atom bomb and its future threatens the government to divulge to these people want it this way and that they will give them what they want. It is not for the good of the people but to make Congressmen popular for next year's election. No doubt you have experienced the change in the goals you receive monthly allowance or your last check will buy now as compared to what it would buy a year ago, or even six months ago. Inflated prices get more inflated each month and this makes you revert to savings earned when you were a child. This is why more than it does now. Everyone in the low income brackets is affected in a similar manner. It is quite natural for the demands, but the supply is not to be had until it is produced. It seems to me that the government is to distribute and regulate the supply for the good of the people.

The system of capitalism is constantly being compared with other forms of government, and we are anxious that it compare favorably. Then does the system, the people can keep it intact. It can make an influential stand in world affairs. If you keep the people's faith, till the beginning of the war, we can make a good stand in our own country, much less the rest of the world. When a country gets bogged down in a depression and the people get hung and out of jobs, we find from history that this is the time of revolution and change. If we wish to avoid this change and keep our form of government to other others as well as our own we must keep ourselves out of this condition. The problem is difficult and cannot be solved by setting a few price controls that can be pushed very far.

TECH PLAYS CHICOPEE, BEATS COVINGTON 9-0

By Ralph Day
With a record of three wins in their first three games, the Tech summer baseball squad will continue the summer schedule on Monday at four o'clock when they meet a Chippopee Mills team on Rose Bowl Field. The Jackets will leave on Friday for Jacksonville, Fla., where they will play the Jacksonville Naval Station team on Saturday.

On Wednesday, July 2, the Jackets met the Georgia Power Company Nine on Rose Bowl Field and emerged on the long end of a 19-9 score. Hitting was heavy on both sides but the Techmen had a decided edge and took the lid from the first, establishing a six run lead in the second when the Powermen were unable to overcome. The Georgia Power team seriously threatened only once, in the third inning, when they narrowed the Jacket lead to 6-4.

Bearing the brunt of Tech's hitting was Hank Lankford, who got a single, a double, and a triple in his three trips to the plate. Sharing hitting honors with Lankford was catcher Toby Walton who got a double and two singles for four times at bat. Doubles by Stewart and Childress were other hits among the total of twelve bingles amassed by the Jackets.

Pitching his first game for Tech, manager Schuster, was steady and effective. Lead-off man Nolan and number two hitter Sermersheim set the pace at the beginning of the game with a single and a double, respectively. Nolan scored to give the Jackets a one run lead.

The Millers duplicated the Tech batters' action in the second half of the first frame but were prevented from scoring by a nifty double play, Childress to Nolan to Keener, which covered the first and second bases.

In the second inning Walton singled but the Jackets were stopped by the alert fielding of the Covington team. The Jackets also displayed some top notch fielding and retired the Millers three up three down the lower half of the second.

Both sides were retired in short order in the third, fourth, and fifth innings but in the top half of the sixth the Jackets found the weakened Covington team. After Childress and Lankford had been walked, Keener hit a single to left field. The Covington left fielder let the ball pass through his hands and Keener rounded the bags, scoring the third run.

The Jackets returned to the steam again in the ninth. After Keener and Stewart each got singles, Broward hit a fly which was muffed by the Covington centerfielder and Keener scored. After Walton walked, filling the bases, Thompson singled and Broward scampered across the plate. Then Sermersheim singled and Walton and Thompson scored making the score 9-0.

As the finale to a superbly pitched ball game, "Sweezy" Thompson struck out the last three Covington batters, three up, three down, to bring his strike-out total for the game to nine.

The Jackets played the fourth game of the season Thursday afternoon after The TECHNIQUE'S deadline, with Pacolet Manufacturing Company, Plant Number 9, of Galloway, Georgia, on Rose Bowl Field.

Burdell’s Finance Status Becomes Catastrophic

Recent rumors about George Burdell’s financial status are nothing but unkind fabrications. Just because he wears his hair long and has moved to a Chattahoochee shack near Homer Loomis, it’s no sign he’s penniless. George has two hundred dollars on deposit, he told the Technique. He just can’t get to it.

His troubles started when his army savings vanished like the passenger pigeon. He might have got by on subsistence checks, of course, but a weakness for hours like eating and living in a room upset his budget. So because quarters George called his family out of two hundred dollars, no mean feat. With buoyant spirits and child-like faith in human nature, he deposited a check for the full amount in the Tech comptroller’s office. Right about then a Hollywood film studio would have started playing ominous minor-key background music.

Next morning Burdell trudged up the hill with every intention of buying a new airplane. A curt note on the treasurer’s office door greeted him: onlyDisturb “sign merely by swiping same. G. P. Burdell at their earliest moment that they are awake.
