THE JOB INTERVIEW is only a few minutes away. The erstwhile seniors await outside and quickly recall again the essentials of the interview discourse. He is ever-aware that an unfavorable impression left with the interviewer will bring almost immediately a letter through the mail containing only disappointment.

Some of the graduating seniors report to the job interview straight from their class the hour before without bothering to jump into a clean change of clothes, but it is only part of hectic schedule during the period of job interviewing. Others enter meticulously dressed “for the office.” But whether the engineer, salesman, or manager of the future reports in his tired loafers or his immaculately tailored suit and conservative tie, the chances of his being offered a position during the wait after the closing of the “career carnival” are good.

IN UNITS OF TIME, four years constitute but a brief segment of a human life span; in units of experience, four years at Georgia Tech are really many more in the development of a man. In childhood we are warned of the dark, cold world; at Tech we become highly prepared for it. The senior has known this preparation; he has seen the sun shine upon the hill a thousand different times, through days of elation, through days of despair: he has struggled to an early class only to flunk a pop quiz; he has trudged home from a late lab completely wasted by an unsuccessful experiment; he has felt the pain of a "dear John" letter, the discouragement of a losing game, the despondency of a poor grade, the depression of loneliness, the burden of eternal study, the temptation of transfer. He stands head and shoulders above the foolish freshman, the cocky sophomore, and the sobering junior, but during the final days, his pensive eyes yet betray his own self-doubt, provoked by the many opportunities of education he let pass by.
