how does one convey to others the great changes in development which have taken place from the freshman to the departing senior? . . . through words? . . . through pictures? . . . or, does one have to experience to grasp its magnitude? it is to you that i . . . and the staff . . . have dedicated this book. the 1962 georgia tech blueprint is much more than a pictorial representation of the events of one school year. it will serve as a reminder in later years, to the student, of the various stages of maturing which occurred during his college life. we began our book with "change," with the entering freshman and the problems facing him in this new mode of life; the change from dependency to a new feeling of independency. we have followed this progression to the end of his college career . . . commencement. at this time, i find myself deeply indebted to those who have labored countless dedicated hours within the walls of the blueprint office. some sacrificed their spring holidays . . . some saw the sun rise through blood-shot eyes many times . . . and all were dedicated. who is to say a job well done . . . ? my gratification will be yours if we have captured a little of the past for you in the future.

A 20-Ft. Diameter Corrugated Pipe?

Yes, and even larger corrugated steel drainage structures are practical. Armco’s new “ring compression” design method makes it possible to design larger structures with lighter steel plates—at less cost. Time Precious?

It always is . . . and as the years go by you'll discover that it becomes more precious every day.
In carrying out your program of future financial security, time is one of the most important factors. And that's where life insurance can take over a big risk. It's the only form of savings that complete your financial planning should you not live . . . or guarantee you an income the rest of your life if you do.
Speaking of time, shouldn't you do something about your financial planning today, while you're still insurable?
