CLASSES
A Tech
Education: 
Tradition
With Change

Education provides a unique atmosphere for the mixing of the innovative with the traditional. This is particularly true at Georgia Tech where the time-honored skills of science, engineering, and management are blended with changing trends in technology and with increasing social awareness. The Tech student no longer appears in class immaculately attired in coat and tie, but he climbs the same hill, sits in many of the same classrooms, and accumulates much of the same knowledge that was dispensed to his predecessors. From the first hour when he dons his rat cap until the last moment when he shifts his tassel from right to left, he experiences the anxieties, the joys, the frustrations, the accomplishments, the endless lectures, the tedious labs, the sleepless nights, and the lasting friendships that have always been a part of life at Georgia Tech. But more important than the knowledge gleaned from textbooks is the insight he gains into his own character, recognizing his potential to perpetuate the good he finds in tradition and to exert his influence to change for the better that which is less than good. For living traditions are dynamic, and education at Georgia Tech is a vibrant concern.
