Senior Relates Trials and Tribulations of his Class

During the summer and early fall of 1904, education sounded, with renewed note, his clarion call throughout the State of Georgia, bidding the youth of the state welcome to the various colleges and universities within our borders. Now, our own school was not backward in publishing to the world the advantages of its particular brand of learning, and its catalogues, teeming with sundry phrases such as "practical education," "trained engineers," "to know — to be — to do," and various other succinct and epigrammatic linguistic morsels, which fall "trippingly from the tongue," had flooded this and many neighboring States and had beguiled many unwary youths with its attractive pictures and business-like descriptions. The burning sentences telling of the certain fame and fortune awaiting the trained engineer sank deep into the minds of many of the adolescent readers, and effected there the resolve to become engineers. So, heedless of the warnings of Jack or Tom, friends who, like so many others, had been and been "flunked," some two hundred of the flower of the land assembled in the then unfamiliar drawing room for the crucial test of exams.

From the hills of Habersham, from the plains of Sumter, from the swamps of Charlton, from the width and breadth of the State came this heterogeneous assemblage, out of which the class of 1908 has been evolved.

Joy welled up in the breasts of those who succeeded in passing the entrance examinations. They dreamed dreams of their engineering careers and drew mental pictures of themselves holding responsible positions. Alas! How quickly were these dreams shattered by the stern reality of Higher Algebra five times a week, with its nerve destroying calculations as to converging and diverging series; by that monster called the English Department, with its insatiable maw, which must have its tale of weekly themes, all nicely seasoned with punctuation and florid rhetorical figures; by the never-ceasing roar of the buzz-planer and the rip-saw, which all but deafened one's ears to the soft autumn breezes, whispering through the shop windows and calling the tired worker out into the fine autumnal sunshine. The very machines which had seemed so interesting in the catalogue pictures declined in interest now that one was granted the pleasure of associating with them three afternoons a week.

To return to the onward march of the two hundred, it is needless to say that in the face of these obstacles some were beginning to have a deeper and deeper conviction that their horoscopes had not pointed to engineering as a profession, and that other fields demanded their activities. This conviction waxed strong in proportion to the amount of time they spent at that student's Elysium, Comer's grocery store. With some, indeed, this conviction waxed so strong that, by dint of correspondence they persuaded the "home folks" that they had best be elsewhere before first term examinations took place. They decided that it would sound better to say that they had left school on account of the failure of their eyes, loss of eye-sight being preferable to ignominious death by examination, and so withdrew from the race while yet there was time.

(con't. page 398)

RIGHT: This 'Techie cranks life into the Ramblin' Reck. BOTTOM, LEFT TO RIGHT: The Junior Class of 1908. The students are attending an informal lecture. Proud engineers pose in the presence of the Tower.
Mechanics Baffles Upperclassmen

At last our weary Freshman year had dragged its length of days into the realm of the past, and then our band dispersed for a quiet three months of rest and pleasure. Our respite from work fled by all too soon, and we returned to take up our labors once more. With hearts emboldened by the thought that we had the satisfaction, at least, of knowing that we were no longer lowly Freshmen, we faced the Sophomore year, high hope throbbing once again in our breasts.

The Sophomore! "Aye, there's the rub." Little did we dream of the profound mysteries of Calculus, or how many of our valiant band would succumb thereto; little did we reckon the puzzling processes of metallurgy; and of the physics laboratory, with its insoluble problems of light and sound, with its umbra and its penumbra, its refraction and reflection, its polarization and its perturbation, its viscosity and its velocity, its moments and its moduli we wist not. But, "Hope springs eternal in the human breast." So, with this great encourager, we toiled through the year and shortly began another.

Do not imagine, patient reader, that our troubles ended with Sophomore year. We had yet to pass up mechanism, with its cycloids, its epicycloids, and its helices; and analytic mechanics, that truly unintelligible study dealing with angles, moments, reactions, forces, friction, acceleration, virtual velocities, "Wi'mair o' horrible and awful."

One bright remembrance from the Junior year, however, comes to our minds. The machine shop was the one haven where we sought rest. Who of us does not remember with pleasure the afternoons we spent riding leisurely back and forth on the machine planers, almost lulled to forgetfulness by the narcotic effect of its gliding motion? But, lest my indulgent readers tire of this repetition of the work-a-day details of our college life, let me move swiftly on to the conclusion of this chronicle. Our final year has been marked, perhaps, by fewer casualties in our ranks, and the warfare which the faculty waged upon us so relentlessly for three long years has, perhaps, lightened for some of us. Still we may paraphrase and say, "Few, few shall graduate where many entered," but we who have survived in the fight may comfort ourselves by hoping that the gradual diminishing in numbers has been but an illustration of the old law of the survival of the fittest. During our last year, which is now so nearly past, we have been more and more closely drawn together; we have had better opportunities of studying the nature and characteristics of each other; we have been more often associated in ways which taught us to know and respect each other; and we have been enabled to form friendships which will last throughout our lives. And though our tasks have at times seemed heavy and our days darkened with much labor, still we will, doubtless, in future years talk over these times not without emotion and with fond recollections of the days we spent at the Georgia Tech.

R.C.W., Class Historian, 1908

TOP, LEFT TO RIGHT: The first two women of Tech practice mechanical drawing. The ME class of 1905 poses for a picture. BOTTOM, LEFT TO RIGHT: Early Techies sure dressed differently! Don't let go! Early transfer students gather in the society of Stray Greeks.
Standing in lines, being part of a large crowd, taking tests; these are all very common activities for all Tech students. From the very beginning, freshmen must learn to adapt to the hectic life at Georgia Tech.

FASET, or familiarization and adaptation to the surrounding environs of Tech, gives freshmen their first taste of campus life, and helps them make the often difficult transition from high school to college.

Upperclassmen are selected from leadership training workshops to lead the FASET groups. During the summer, incoming freshmen are tested, advised, and registered for classes. These students' parents can also participate in the program, spending time with faculty and administrators learning about expectations and opportunities available on campus.

The FASET program is sponsored by the Office of New Student and Parent Programs, which also sponsors other programs for new students throughout the year. Parents Day, held during Homecoming weekend, included campus tours and a breakfast with faculty. Activities Day during Fall quarter also introduced new students to the many campus organizations.

*TOP, LEFT TO RIGHT:* New freshmen ask questions to the FASET leader. FASET participants enjoy buffet lunch. *BOTTOM, LEFT TO RIGHT:* New freshmen learn about common Tech activity. Parent joins students in FASET meetings.

This coed ponders her opportunities between classes.
A little help is needed before graduation.

Seniors
The Arts Festival is one of many activities within the Atlanta area.
Outside activities prove to be more interesting than studying.

Seniors
Whether performing, observing, or aiding, experiments are a vital part of learning.
