WORK PERFORMED DURING THIS REPORTING PERIOD

During this reporting period, the main effort has been to become familiar with the MIRADCOM Digital Air Defense Simulator (MIDAS) by reviewing the MIDAS documentation and looking at the actual simulator code.

The simulator source code is being implemented on the CDC-6600 computer for simulator execution. The various guidance modes of PATRIOT will be evaluated relative to what subroutines and data in MIDAS are actually required in order to simulate PATRIOT in the RFSS for guidance performance evaluations against the TBM threats.

PROBLEMS ENCOUNTERED

None

WORK TO BE DONE

The MIDAS simulator has more capability than is required for implementation of the PATRIOT missile receiver hardware in the RFSS. Thus, the basic effort is to understand not only the MIDAS simulator but also the PATRIOT missile system in order to develop a preliminary set of design requirements for the real time hardware-in-the-loop simulation of PATRIOT.

The modifications to MIDAS will be designed such that the program structure will allow either an all-digital simulation or a hardware-in-the-loop simulation using actual missile receiver hardware.
