1. Job Shops Listed in Directory x
Foreword

Georgia is well placed for sustaining the growth of a large metalworking complex. The state's central location in the Southeast and its transportation facilities, which can efficiently serve the Southeast, have been largely responsible for recent growth and can be expected to spark continued development.

Expansion of Georgia's present metalworking industry and establishment of new facilities within the state are not likely to proceed at the fastest possible rate, however, so long as there is a lack of information on the state's existing metalworking complex, its job shop capabilities, and its metalworking service industries. Since the various segments of the industry provide each other with subcontracting work, trained labor, markets, raw materials, supplies, and services -- the extent of interdependence is greater than in most other industries -- an awareness of the capabilities, facilities, and services which make up Georgia's existing metalworking base is essential to optimum growth.

The Directory of Metalworking Job Shop Capabilities fits into this framework as a comprehensive analysis of the state's metalworking complex and related service industries. It will assist buyers for existing Georgia companies in placing job shop orders and will be a tool with which industrial developers can point up some of Georgia's existing capabilities to out-of-state prospects interested in job shop work. In addition, bringing these capabilities to the attention of customers should give the companies listed in the directory an opportunity to expand.

This directory is the fourth edition of a well received and extensively used publication. The three previous editions, published in 1966, 1971 and 1975, have led to special studies pertaining to numerous facets of the metalworking industry. Comments regarding the contents of this report and inquiries regarding possible additional special studies to be undertaken will be welcomed.

INTRODUCTION

The Directory of Metalworking Job Shop Capabilities is designed to be a guide to contract metalworking services in Georgia. Its individual company listings describe the equipment capabilities of both pure job shop companies and proprietary product companies which want to do job shop work. Through the detailed index in the back of the directory, plants with a specific type of equipment can be identified.

Each company listing begins with a tab showing its name, address, and number of employees. Equipment capabilities are then listed first by process -- forming, machining, fabricating, finishing, and casting -- and then by type of machine or facility. All equipment associated with a given process is grouped together so that total capability and possible combinations of machinery can be readily ascertained. Equipment which does not fit the standard directory format is listed separately under the heading "Special Facilities."

Emphasis in the directory has been placed on the capabilities of machinery rather than the quantity. Companies in the directory commonly have more than one machine of a given type, but only the machine which best describes the total capability is listed. However, in most cases plant capacity can be determined from the number of employees and the extent of machine variety. The directory format lists all machine types plurally as a matter of consistency.

Following the equipment capability listings are brief statements, where available, on company status as precision shop, access to rail sidings, and principal business.

The company listings are grouped alphabetically first by the Georgia county in which they are located and then by company name. A brief alphabetical listing solely by company name, which also identifies the city and county for each company, precedes the directory proper.

To find a specific type of machine, use the equipment index. A guide to the index immediately precedes it. Like the individual listings, the index is arranged first by process, then by type of machinery, although machinery types are listed alphabetically here. Companies are listed alphabetically under each machine type.

Information for this directory was collected through questionnaires and personal and telephone interviews. More than 500 metalworking firms in Georgia were solicited. Those companies expressing an interest in job shop work received comprehensive questionnaires on their equipment capabilities. The questionnaires which were
completed and returned were adapted to a standard format and are the basis for this directory. The terminology of the company listings is that of the individuals who completed and returned the questionnaires.

Interviews in connection with the directory turned up some common characteristics of Georgia's job shop companies. They generally are willing to either furnish raw materials or use those supplied by the customer. They prefer to handle a complete job, but will subcontract where dictated by economic or customer preference or schedules. Except as noted in the directory, they serve a variety of industries. They use their own trucks for local delivery, but frequently rely on common carriers for shipment to distant points. Finally, they are able to compete at distances far greater than is common in the North.

This directory is a fourth edition and includes most of the companies in Georgia which are interested in contract metalworking. Companies wishing to appear in future editions should request questionnaires from:

DIRECTORY OF METALWORKING JOB SHOP CAPABILITIES
Engineering Experiment Station
Georgia Institute of Technology
Atlanta, Georgia 30332

Companies presently included in the directory should send information on major machinery additions or corrections to the same address. Directory users are invited to suggest changes which will make future editions more useful.

EQUIPMENT CAPABILITY
INDEX
The Equipment Capability Index is made up of five major divisions -- Forming, Machining, Fabricating, Casting, and Finishing. Each type of equipment or process is listed alphabetically in the section which best describes its function, and company names are given alphabetically under each machine type. Hydraulic presses, for example, are found under FORMING as **Presses, Hydraulic**. All companies reporting hydraulic presses follow alphabetically.

Terms indexed are as follows:

**FORMING**
- Bending Rolls
- Brakes
- Forging
- Ironworkers
- Lockformers
- Presses
  - Hydraulic
  - Mechanical
  - NC
- Roller Formers
- Shears
- Slitters

**MACHINING**
- Boring Mills
  - Horizontal
  - Vertical
- Broaching Machines
- Drills
  - Multi-Spindle
  - Radial
  - Turret
  - Upright
- Electrical Machining Units
- Gear-Making Machines
- Grinders
  - Centerless
  - External
  - Internal
  - Surface
- Jig Borers
- Keyseaters
- Lathes
  - Automatic
  - Engine
  - Screw Machines
  - Turret

**MACHINING, continued**
- Milling Machines
- NC Machines
  - Boring
  - Drilling
  - Lathe Work
  - Milling
  - Planers
  - Saws
  - Band
  - Circular
  - Reciprocating
  - Shapers

**FABRICATING**
- Arc Welding
- Brazing
- Spot Welding

**FINISHING**
- Anodizing
- Heat Treating & Stress Relieving
- Painting
- Plating
- Polishing
- Sandblasting

**CASTING**
- Ferrous
